HIGH/NEW ★

CYB-001 Cisco SD-WAN CVE-2026-20262 -- CISA KEV deadline 29-JUN (5 DAYS REMAINING) -- Active exploitation confirmed -- UAT-8616 attributed -- 8th Cisco SD-WAN

	zero-day 2026 -- No workaround -- KEV overdue backlog: Check Point +13 days ransomware, PAN-OS +23 days, Arista no-patch, 9+ entries total
HIGH/UPDATED ↻	DOM-002 DOM-003 UK PM Starmer resigned 22-JUN -- Andy Burnham near-certain successor -- nominations 9-16 JUL -- new PM ~18-19 JUL -- caretaker government during active Hormuz/MOU window PHS-002 DOM-003 UK PM Starmer resigned 22-JUN / Burnham near-certain successor / nominations 9-16 JUL / caretaker during MOU window DOM-002 Belfast Day 16 fragile calm / 25 arrests (10 juveniles) / 14-JUN Glenbank arson Fragile calm -- July marching season approachingd Mongbwalu -- Uganda 19 confirmed / 2 deaths -- no licensed vaccine
CRITICAL TIME HACK	SEVERE WEATHER TODAY: SPC Day 1 ENHANCED Central High Plains (NE Colorado / SE Wyoming) -- very large hail 2-4 inch isolated, tornadoes possible, 75+ mph MCS gusts tonight. SLIGHT: Utah outflow, WI/N Illinois, Florida, Southern Plains-ArkLaTex. Day 2 SLIGHT KS-OK-Ozarks -- evening tornado threat elevated as LLJ strengthens. SPACE WEATHER TODAY: NSTR -- No active alerts or warnings as of 1343Z 24-JUN. All SWPC thresholds below action levels. SWX-CON 1 NORMAL. MOU SIGNED: IAEA DG Grossi at Fukushima press conference (24-JUN): inspections of Iranian nuclear sites will happen per MOU text -- "This is going to happen." Iran silent as of cycle close. Grossi called US-Iran dispute a "war of words" -- MOU text governs. Technical talks resume next week Burgenstock. Lebanon 5th round (State Dept 23-25 JUN) in progress. See NUC-001/GEO-CF-IRAN. ARTHUR REMNANTS: NIFC NPL 3 (raised 19-JUN). 31 large fires uncontained, 77 new fires yesterday, 5,900 personnel, 3 CIMTs. YTD 34,262 fires / 2.7M acres exceeds 10-yr avg. Critical: Cottonwood UT (extreme), Iron UT (CIMT), Grapevine NV, Pocket AZ (CIMT), Lytle OR. Fire Wx CRITICAL W/C Utah dry thunderstorms today. See WX-002/SEC 7B. IL/IN TORNADOES: Ebola PHEIC Day 40: 1,000+ confirmed cases DRC -- 2nd largest outbreak on record. 254 deaths DRC, 2 Uganda. No vaccine or treatment. Contact tracing 45% (requires 90%). CDC MMWR: 10,000-20,000 cases possible in 3 months without escalated containment. See PHS-002 / SEC 3. SPC ENHANCED: UK PM Starmer resigned 22-JUN. Andy Burnham near-certain successor; nominations 9-16 JUL; new PM ~18-19 JUL. Caretaker government during active Hormuz/MOU window. Britain will have 7 PMs in 10 years. See DOM-003. OIL/FUEL: Brent \$74.73 (24-JUN, lowest since pre-war). AAA pump \$3.93/gal, 6-week decline from \$4.56 peak. Iran chief negotiator: Hormuz "will be administered by Iran." Oman-Iran transit fee discussions -- forward structural risk. Physical normalization 9-12 months. Trump DOJ fuel price probe announced 24-JUN. See FIN-001/SC-001. NWR: 23 transmitters OOS/DEGRADED (net +5 from prior). NM triple-gap: Artesia/Roswell/Carlsbad all OOS. AK cluster: 5 affected. NEW OOS: CA Santa Ana, MA Leyden, NC Statesville, TX Ozona, TX Rio Grande City, AK Point Pigot. IN Angola improved OOS to DEGRADED. KS Ulysses OOS during today's active severe weather. See Section 7 NWR table.

BOTTOM LINE UP FRONT

24 JUNE 2026 | PREP-CON 3 BROWN SKY | COMCON 4 INCREASED VIGILANCE | Op Epic Fury / Hormuz Day 117 | MOU Day 8 | IAEA Blackout Day 117 | Ebola PHEIC Day 40 | NIFC NPL 3 | World Cup Day 15 | UK PM STARMER RESIGNED 22-JUN

THE CYCLE - QUICK LOOK

► [GEO-CF-IRAN](#): GEO/NUC - IAEA DG GROSSI (24-JUN): "This is going to happen" -- inspections of Iranian nuclear sites required by MOU text. Cuts through US-Iran "war of words." Iran silent as of cycle close. Technical talks resume next week Burgenstock. Lebanon 5th-round talks (State Dept 23-25 JUN) in progress, outcome pending. ENERGY - BRENT \$74.73 (24-JUN LOWEST SINCE PRE-WAR): AAA pump \$3.93/gal, 6-week decline from \$4.56 peak. Markets front-running normalization ahead of physical flows. Iran chief negotiator: Hormuz "will be administered by Iran." Oman-Iran transit fee discussions --

forward structural risk. Physical normalization 9-12 months. Trump DOJ fuel price probe announced 24-JUN. See FIN-001/SC-001.

► **NUC-001: IAEA BLACKOUT DAY 117 -- GROSSI (24-JUN): INSPECTIONS "GOING TO HAPPEN" PER MOU TEXT -- IRAN SILENT AS OF CYCLE CLOSE -- TECHNICAL TALKS RESUME NEXT WEEK -- 440.9 KG 60% HEU UNVERIFIED.** Grossi at Fukushima press conference (24-JUN): MOU text requires IAEA supervision -- "This is going to happen." Cuts through US-Iran "war of words." Iran FM Baghaei denied inspections of bombed sites (23-JUN); Grossi overrode this citing MOU text. Technical talks resume next week Burgenstock; nuclear working group primary watch item. ISIS: 60%-HEU stockpile sufficient for multiple devices; weaponization capability severely degraded by strikes; breakout timeline 1+ year from zero. See NUC-001/GEO-CF-IRAN.

► **CYB-001: CISCO SD-WAN CVE-2026-20262 -- CISA KEV DEADLINE 29-JUN (5 DAYS) -- ACTIVE EXPLOITATION CONFIRMED -- UAT-8616 ATTRIBUTED -- 8TH CISCO SD-WAN ZERO-DAY 2026 -- NO WORKAROUND.** CVE-2026-20262 (CVSS 6.5): path traversal in Cisco Catalyst SD-WAN Manager allowing authenticated attacker to overwrite OS files -- chain to root. All deployment types affected. Active exploitation confirmed by Cisco PSIRT + CISA. Federal mandate deadline: 29-JUN-2026 (5 days). No workaround -- upgrade only. Attribution: UAT-8616 (same campaign as CVE-2026-20245, deadline passed 23-JUN). KEV overdue backlog: Check Point (+13 days, ransomware), PAN-OS (+23 days), Arista (no patch planned), 9+ total. See CYB-001.

► **WX-001: SPC DAY 1 ENHANCED CENTRAL HIGH PLAINS (NE CO/SE WY) -- VERY LARGE HAIL 2-4 INCH ISOLATED, TORNADOES POSSIBLE, 75+ MPH MCS GUSTS TONIGHT -- SLIGHT: UTAH/WI/FLORIDA/S.PLAINS -- DAY 2 SLIGHT KS-OK-OZARKS.** SPC Day 1 ENHANCED: Central High Plains (NE Colorado / SE Wyoming). 2,000-3,000 J/kg MLCAPE; 50-60 kt deep-layer shear; supercells with 2-4 inch hail isolated, possible tornadoes, 75+ mph MCS gusts tonight. SLIGHT: Utah outflow winds; Wisconsin/N Illinois hail/winds; Florida pulse storms; Southern Plains MCV. Day 2 SLIGHT: KS/OK/Ozarks -- evening tornado threat elevated as LLJ strengthens. Fire Wx CRITICAL: western and central Utah -- dry thunderstorms, pyrocumulus possible. FORWARD: Major trough Friday-Saturday -- widespread critical fire conditions 40+ mph gusts. See WX-001/WX-002.

► **WORLD CUP DAY 15 (24-JUN): Groups A, B, C concluding today -- Mexico City/Monterrey (Group A), Vancouver/Seattle (Group B), Miami/Atlanta (Group C).** No confirmed physical security incident this cycle. Next elevated security window: July 4-5 weekend -- matches in Dallas, KC, Houston, Philadelphia, NYC converging with Independence Day. See STSB-001.

► **PHS-002: EBOLA PHEIC DAY 40 (BUNDIBUGYO): 1,000+ CONFIRMED CASES DRC (22-JUN) -- 2ND LARGEST OUTBREAK ON RECORD. 254 DEATHS DRC / 2 DEATHS UGANDA. NO APPROVED VACCINE OR TREATMENT. CDC MMWR: 10,000-20,000 CASES POSSIBLE IN 3 MONTHS.** 1,000+ confirmed cases (CDC 22-JUN) -- fastest case accrual rate in Ebola history. Ituri Province DRC: primary burden (20 health zones). North Kivu: 67 cases. South Kivu: 3 cases. Uganda: 19 confirmed cases (Kampala). Contact tracing ~45% (WHO requires 90%). 17 HCW dead, 75 infected. 150+ patient escapes since late May. MSF: 3 treatment centers operational. CEPI fast-track vaccine funding committed 1-JUN. CDC MMWR (June 2026): without intensified containment, could exceed 10,000-20,000 cases within 3 months. US: no confirmed cases; enhanced entry screening at IAD/ATL/IAH/JFK. See PHS-002/SEC 3.

► **DOM-002: BELFAST DAY 16 -- FRAGILE CALM. LEGAL/PROSECUTION PHASE: 25 ARRESTS (10 JUVENILES, YOUNGEST 12). FOLLOW-ON HATE CRIME ARSON 14-JUN (GLENBANK PLACE, BALLYSILLAN). JULY MARCHING SEASON IS NEXT ELEVATED RISK WINDOW.** Riots subsided Day 16. 25 total arrests (10 aged 16 or under, youngest 12); 17 charged as of 13-JUN; PSNI reviewing all video footage for further arrests. Suspect Alodid remanded, charged with attempted murder. Victim Ogilvie: out of induced coma, may still lose sight in remaining right eye. New incident: 14-JUN racially motivated arson at Glenbank Place, Ballysillan -- PSNI investigating as hate crime. Fragile calm assessed; structural conditions unchanged. July marching season (Twelfth of July) is next elevated risk window. See DOM-002.

► **EU COUNCIL 18-19 JUN CONCLUSIONS:** EU27 leaders adopted Ukraine conclusions 18-19 JUN. Key outcomes: accession cluster formally opened 15-JUN (Ukraine/Moldova fundamentals cluster); EUR 90B loan first disbursement to Ukraine before end of June; EU "ready to step up engagement in peace negotiations"

(first time EU endorses hands-on peace process role); condemned Russian drone that crashed into Romanian residential building 29-MAY; Ukraine Recovery Conference Gdansk 25-26 JUN. No Russian ceasefire signal. Leaders heard from Zelenskyy.

NOT DETAILED HERE: NOT DETAILED HERE: Belfast Day 16 legal phase (DOM-002); World Cup Day 15 venue posture (STSB-001); Space weather NSTR (SWX-001); Full NWR transmitter roster (Sec 7 NWR table); Agriculture NSTR.

DECISIVE WINDOW (NEXT 48-72 HRS): Lebanon 5th-round talks (State Dept) conclude 25-JUN -- outcome determines Hormuz tripwire status. Technical talks resume next week at Burgenstock -- nuclear working group primary watch. Cisco SD-WAN CVE-2026-20262 federal deadline 29-JUN (5 days). Friday-Saturday major trough -- critical fire weather conditions 40+ mph gusts -- fire managers should pre-position resources now. Ebola WHO sitrep expected ~29-JUN-2026.

SECTION 2 - MARKET INDICATORS

COMMODITY TRACKER - WAR IMPACT vs. PRE-WAR BASELINE (28 FEB 2026)

COMMODITY	PRE-WAR (28 FEB)	CURRENT (15-JUN)	CHG vs PRE-WAR	CONSUMER / ANALYTICAL NOTE
Brent Crude (front)	~\$66/bbl	\$74.73/bbl (24-JUN)	+17%	3-month low. Burgenstock 60-day roadmap + US Treasury 60-day Iranian oil sales license = faster supply recovery expectations. Iran shipped 30M+ barrels past week. Kuwait/UAE using alternative export routes. Mine-clearing underway (~80 mines estimated). Goldman cut Q4 Brent to \$80. Hormuz normalization 9-12 months.
WTI Crude (front)	~\$63/bbl	~\$71-72/bbl (24-JUN)	+17%	Tracking Brent lower. Hormuz recovery expectations compressing war premium. US crude inventories tight (Cushing ~20M barrels). Tankers clearing Hormuz; Kuwait ramping production.
Gasoline (natl avg)	~\$3.10/gal	\$3.926/gal (AAA 23-JUN)	+27%	CHANGE FROM PRIOR: Down from \$4.13-4.17 -- significant single-cycle decline. Physical Hormuz recovery faster than EIA May STEO projected (\$105 forecast vs \$77.20 actual). Jones Act

FORTUNE FAVORS THE PREPARED DAILY THREAT REPORT 24 JUNE 2026				
COMMODITY	PRE-WAR (28 FEB)	CURRENT (15-JUN)	CHG vs PRE-WAR	CONSUMER / ANALYTICAL NOTE
				waiver (60 days) supporting Gulf Coast. Full normalization 9-12 months; pump price decline continuing but non-oil (fertilizer, methanol) costs remain elevated.
Diesel (US No. 2)	~\$3.74/gal	~\$5.40+/gal	+44%	Trucking and ag margins compressed. Hormuz fertilizer/freight pass-through continuing until physical reopening.
Ocean Freight / Maritime	~1,333 pts BDI	Hormuz ~95% below pre-war	+variable	MARAD 2026-008 active (GPS precautions, attack risk "high"). Physical reopening requires mine-clearing, infrastructure repair, IRGC demobilization. DHL 777F emergency airlift running (Asia-US + Asia-Europe). Africa reroute +10-14 days. Port congestion: Jeddah/Khorfakkan/Sohar/Fujairah/Salalah persists until transit normalizes.

SECTION 3 - FLASH EVENTS (Score >= 20)

GEO-CF-IRAN Op Epic Fury Day 117 / Hormuz Day 117 MOU Day 8 IAEA DG GROSSI (24-JUN): Inspections "Going to Happen" Technical Talks Resume Next Week Lebanon 5th Round (State Dept 23-25 JUN) Brent \$74.73 IAEA Blackout Day 117		FLASH UPDATED 24
SALUTE	SIZE: US-Iran MOU: signed 17-JUN-2026 (Trump at Versailles, Pezeshkian in Tehran). In force Day 8 of 60-day framework. MOU covers: ceasefire all fronts including Lebanon; Hormuz free passage; oil sanctions waivers effective immediately; frozen assets to be released; HEU disposition deferred to Phase 2. IAEA verification blackout: 117 days since 28-FEB-2026. Brent \$74.73 (24-JUN). Hormuz traffic: ~24 vessels/day vs 110 pre-war. ACTIVITY: 24-JUN (THIS CYCLE): IAEA DG Grossi at Fukushima press conference confirmed inspections will happen per MOU text: "This is going to happen." Iran silent as of cycle close. Grossi called US-Iran dispute a "war of words" -- MOU text governs over public statements. Pakistan FM confirmed technical talks resume early next week at Burgenstock. Lebanon 5th-round talks ongoing at State Dept through 25-JUN (political and military tracks). Brent \$74.73 -- lowest since pre-war -- markets front-running normalization ahead of physical flows. Iran chief negotiator declared Hormuz "will be administered by Iran"; Oman-Iran transit fee discussions underway. LOCATION: MOU signed: Versailles France (Trump) and Tehran Iran (Pezeshkian) -- 17-JUN. Technical talks: Burgenstock Resort, Switzerland (resume early next week). Lebanon talks: US State Dept, Washington DC (23-25 JUN). Hormuz: partial recovery underway -- mine-clearing required for full normalization. Brent crude: \$74.73/bbl (24-JUN morning, lowest since pre-war). TIME: MOU signed: 17-JUN-2026. MOU Day 8 as of 24-JUN-2026. 60-day framework expires mid-August. Grossi statement: 24-JUN-2026. Lebanon 5th round: 23-25 JUN at State Dept. Technical talks (Burgenstock): resume early next week. Hormuz physical normalization: 9-12 months (IATA/IEA). EQUIPMENT: Hormuz: mine-clearing underway; GPS spoofing subsided near strait (22-JUN per MarineTraffic). Nuclear: 440.9 kg 60%-HEU (last IAEA-verified 28-FEB-2026; unverified Day 117). Hormuz traffic: ~24 vessels/day vs 110 pre-war. Iran-Oman transit fee discussions ongoing.	

	UNIT: IAEA (Grossi); US technical team (State Dept); Iran delegation; Pakistan FM (mediator, confirmed talks next week); Qatar (mediator); IAEA -- MOU text requires IAEA supervision per Grossi 24-JUN.
Why This Cycle	Grossi's statement today (24-JUN) is the most operationally significant IAEA communication since MOU signing on 17-JUN. It anchors the inspection requirement in MOU text -- directly contradicting Iran FM Baghaei's 23-JUN categorical denial and Trump's 23-JUN rebuttal. Lebanon 5th-round talks (State Dept 23-25 JUN) are at a critical juncture: Iran has explicitly tied Hormuz compliance to Lebanon ceasefire holding. This is the primary tripwire for MOU collapse. Brent \$74.73 is new cycle data warranting update; markets are front-running physical normalization that will lag by 9-12 months.
Summary	MOU signed 17-JUN-2026 by both presidents (Trump at Versailles, Pezeshkian in Tehran). Now Day 8 of 60-day implementation framework. Key MOU terms: ceasefire all fronts including Lebanon; Hormuz free passage; oil sanctions waivers effective immediately; frozen asset release tied to compliance; HEU disposition deferred to Phase 2. THIS CYCLE (24-JUN): IAEA DG Grossi at Fukushima press conference stated MOU text is unambiguous -- inspections WILL happen. "This is going to happen. Of course, if they want to comply with the agreement." Called the US-Iran public dispute a "war of words" that does not change the legal text. This cuts through Iran FM Baghaei's 23-JUN categorical denial ("no inspections of bombed sites planned") and Trump's 23-JUN rebuttal ("Iran statements false"). Iran silent on Grossi statement as of cycle close. Pakistan FM confirmed technical talks resume early next week at Burgenstock (nuclear working group and sanctions working group to meet twice weekly). Lebanon 5th round (State Dept 23-25 JUN): US mediating political track (permanent ceasefire terms) and military track (IDF withdrawal timeline, Lebanese Army deployment). Hezbollah continues to reject any deal absent full IDF withdrawal. Iran has tied Hormuz compliance to Lebanon ceasefire -- making this the single primary tripwire for MOU collapse. Hormuz traffic recovering but remains at ~24 vessels/day vs 110 pre-war. Brent \$74.73 (24-JUN, lowest since pre-war) -- markets front-running normalization ahead of physical flows (9-12 month lag per IATA). GPS spoofing near Hormuz subsided (22-JUN per MarineTraffic). Iran chief negotiator on return from Burgenstock: Hormuz "will be administered by Iran" -- Oman-Iran discussing transit fees.
Analyst Assessment	MOU SIGNIFICANCE: IAEA DG speaking from MOU text on 24-JUN is categorically different from Vance's assertion and provides authoritative third-party resolution to the US-Iran "war of words." Iran's silence rather than a new denial may signal Tehran is assessing options before responding. MOU remains a time-buying framework: oil sanctions relief and Hormuz reopening are immediate; the hard questions (HEU disposition, IAEA verification, Iranian missile program, Hezbollah) are deferred to Phase 2. The 60-day Phase 2 window is now running. Watch: (a) Iran response to Grossi; (b) whether Burgenstock technical talks next week specifically address inspection modalities. HORMUZ REOPENING TIMELINE: Brent \$74.73 (24-JUN) reflects markets fully pricing in the best-case normalization scenario. Physical traffic remains at ~24 vessels/day vs 110 pre-war -- a 78% gap. GPS spoofing has subsided near the strait, a positive maritime safety indicator. Mine-clearing is ongoing but requires weeks of coordinated EOD effort before full commercial transit. IATA/IEA: 9-12 month physical normalization under optimistic scenario. Iran chief negotiator's "administered by Iran" statement and Oman-Iran transit fee discussions represent an emerging structural risk not yet priced by markets. LEBANON SPOILER RISK: Lebanon 5th-round talks (State Dept 23-25 JUN) are attempting to create a stable enough Lebanon framework that Iran cannot credibly invoke the MOU violation clause. Every IDF strike in Lebanon gives Iran grounds to exit the agreement. Hezbollah continues to reject any deal absent full IDF withdrawal. Iran has tied Hormuz compliance to Lebanon ceasefire -- meaning Hormuz traffic at ~24/day vs 110 pre-war could fall further if any significant IDF-Hezbollah exchange occurs before the Lebanon track concludes. PHASE 2 BURGENSTOCK WATCH: Burgenstock Phase 1 technical talks concluded. Technical working groups (nuclear, sanctions) resume early next week per Pakistan FM. Sessions to meet twice weekly alternating Vienna/virtual. Nuclear working group is the primary watch item: will it specifically address IAEA inspection modalities, and does Iran participate constructively or obstruct? The 60-day framework expires mid-August -- the clock is running.

CHANGE FROM PRIOR: CHANGE FROM PRIOR (Day 7 to Day 8): Key new this cycle -- Grossi statement anchors inspection requirement in MOU text, providing authoritative resolution to US-Iran public dispute. Brent fell further to \$74.73 (prior cycle ~\$77.20). Lebanon 5th round now at State Dept (23-25 JUN) vs prior cycle preparation phase. Score maintained at FLASH (25) reflecting: MOU implementation fragility; unresolved IAEA access modalities; Lebanon tripwire active; Hormuz physical traffic still far below pre-war norms.

LIKELIHOOD: IAEA inspections of Iranian nuclear sites commence within 10-14 days: LIKELY - contingent on Iran not actively blocking access. **CONFIDENCE:** MODERATE.

LIKELIHOOD: Lebanon 5th-round talks produce durable ceasefire arrangement: ROUGHLY EVEN CHANCE. **CONFIDENCE:** MODERATE.

LIKELIHOOD: Hormuz commercial traffic returns to pre-war levels within 60 days: VERY UNLIKELY. **CONFIDENCE:** HIGH.

ALT HYP

ALT A: MOU signing proceeds 19-JUN; ceasefire holds; Hormuz reopens (mine-clearing phase begins) [likely]

Deal text confirmed by both sides; Pakistan and Qatar mediating; Trump and Iran SNSC both publicly confirmed; oil markets priced in deal; Trump at G7 Evian today where Iran deal will be on agenda; economic incentives on both sides are enormous.

✓ **Supporting Evidence:** Iran FM Araghchi confirmed agreement; SNSC confirmed; economic and political pressure on Tehran to end conflict; Brent fell >4% reflecting high market confidence in near-term signing.

✗ **Ruling-Out Evidence:** Lebanon IDF-Hezbollah exchange on 14-JUN nearly derailed the deal; Iran military "will not allow Sunday's strikes to go unanswered"; Israel is not party to deal and retains operational freedom; Supreme Leader Khamenei final sign-off not publicly confirmed; physical Hormuz reopening will take weeks-to-months regardless.

ALT B: Lebanon exchange escalates and collapses MOU before 19-JUN signing [unlikely]

IDF strikes on Dahiyeh 14-JUN and Iran's stated intent to respond create a live tripwire; Hezbollah has repeatedly violated ceasefire terms; Israel has explicitly said it is not bound by the US-Iran deal; prior exchanges (7-JUN, 14-JUN) each nearly derailed negotiations.

✓ **Supporting Evidence:** Both the US and Iran have strong economic incentives to preserve the deal; Trump explicitly condemned Sunday's Israeli strikes on Beirut (a departure from prior posture); Pakistan and Qatar mediators remain actively engaged; Iran SNSC confirmed ceasefire intent same day as Dahiyeh strikes.

✗ **Ruling-Out Evidence:** If it were going to collapse it likely would have collapsed on Sunday night given Iranian military statements; the pace of events has been absorb-and-sign rather than escalate-and-reject.

NUC-001 / GEO-CF-IRAN | IAEA DG GROSSI (24-JUN): Inspections "Going to Happen" | MOU Day 8 | 117-Day Verification Blackout | Technical Talks Resume Next Week | Lebanon 5th Round In Progress (23-25 JUN)m in MOU -- Phase 2 Burgenstock 19-JUN Uncertain

FLASH | UPDATED | 24

SALUTE	SIZE: 440.9 kg 60%-enriched uranium hexafluoride (60% UF₆) plus 8,599.6 kg lower-enriched uranium -- last IAEA-verified snapshot per GOV/2026/8, 27-FEB-2026. ACTIVITY: 24-JUN (THIS CYCLE): IAEA DG Grossi at Fukushima press conference stated MOU text requires IAEA supervision of nuclear activities -- "This is going to happen." Iran silent as of cycle close. Grossi called US-Iran dispute a "war of words" -- MOU text governs. Pakistan FM confirmed technical talks resume early next week Burgenstock. Lebanon 5th-round talks at State Dept through 25-JUN: political and military tracks. access. MOU SIGNED 17-JUN: does NOT create IAEA access -- Iran FM Araghchi confirmed. MOU text (Art. 5): Iran reaffirms shall not procure or develop nuclear weapons; mechanism to dispose of enriched material "will be mutually agreed" -- i.e., deferred to Phase 2. IAEA supervision of downblending mentioned as minimum arrangement but mechanics remain Phase 2 subjects. Arms Control Association: even starting from zero HEU, Iranian nuclear breakout likely less than 12 months. IAEA Board resolution passed 10-JUN 21-3 (Russia, China, Niger against) demanding cooperation. Fordow largely intact per open-source assessment. Isfahan tunnel complex received 18 blue transport casks on flatbed trucks 9-JUN-2025 per Bulletin of Atomic Scientists satellite analysis -- potential HEU repository. LOCATION: Natanz (above-ground centrifuge hall significantly degraded by strikes); Fordow underground enrichment facility (assessed intact); Isfahan tunnel complex (assessed intact); Pickaxe Mountain candidate site. TIME: Grossi statement: 24-JUN-2026 (this cycle). MOU signed: 17-JUN-2026. Phase 1 Days 1-20: IAEA inspector facilitation. 60-day roadmap expires mid-August. IAEA Blackout Day 117. EQUIPMENT: Centrifuge cascades at Fordow and Isfahan assessed operational. HEU stockpile location currently unverifiable. UNIT: AEOI (Atomic Energy Organization of Iran); IRGC site security; IAEA Board of Governors.
Why This Cycle	The US-Iran MOU agreed Sunday 14-JUN explicitly defers HEU disposition to Phase 2 talks and does NOT create IAEA access -- confirmed by Iranian FM Araghchi on the day of agreement. This is the most significant NUC-001 development this cycle: the diplomatic resolution everyone was waiting for arrived, and it leaves the proliferation verification gap entirely intact for at least another 60 days. Saudi Arabia has conditioned Phase 2 nuclear acceptance on IAEA verification guarantees the agency can no longer provide. The structural constraint on the deal's durability is the gap between what the MOU promises (nuclear negotiations) and what exists (no verification mechanism).
Summary	Grossi's statement today is the most operationally significant IAEA communication since MOU signing. It anchors the inspection requirement in MOU text rather than Vance's assertion, directly contradicting Iran's 23-JUN denial. Lebanon 5th-round talks are at a critical juncture -- their outcome controls Hormuz normalization vs. stall. Iran has tied Hormuz compliance to Lebanon ceasefire holding.e MOU "does not create access" for IAEA inspectors. The 440.9 kg of 60%-enriched HEU last verified by the IAEA on 27-FEB-2026 remains unaccounted -- the MOU defers HEU disposition entirely to Phase 2 talks within a 60-day post-signing window. Trump confirmed in a New York Times interview that the MOU permits Iran low-level enrichment; final enrichment limits and HEU disposal are Phase 2 subjects. The IAEA Board passed a resolution 21-3 on 10-JUN demanding cooperation; Russia, China, and Niger voted against. Fordow underground facility and Isfahan tunnel complex are both assessed as largely intact. Western officials assessed (Bloomberg, 3-JUN) that the risk of covert nuclear weapons pursuit is higher today than before the February 2026 US-Israeli strikes.
Analyst Assessment	PROLIFERATION SIGNIFICANCE: 440.9 kg of 60%-enriched uranium is sufficient fissile material for multiple nuclear weapons if further enriched to 90%+. At 60% the material is already well past the threshold enrichment level and represents the most proliferation-significant HEU

stockpile outside declared nuclear weapon states. The verification gap means neither the quantity nor the location of this material can be confirmed by any external party.

DEAL LEVERAGE DYNAMIC: The HEU stockpile is Iran's primary negotiating leverage. Surrendering it as the US demands removes that leverage permanently. Iran's down-blend counter-offer preserves the option of re-enrichment and is therefore strategically rational from Tehran's perspective. This asymmetry is unlikely to resolve without a verification mechanism neither side has demonstrated willingness to create.

MOU SIGNED -- VERIFICATION GAP UNCHANGED: The MOU is now signed and in force. It does not restore IAEA access. The 440.9 kg of 60%-enriched HEU remains unverified and unaccounted. The MOU's own text defers the disposal mechanism to Phase 2 mutual agreement. Until Phase 2 produces a verification framework, the IAEA blackout continues regardless of MOU status. Saudi Arabia has conditioned Phase 2 nuclear acceptance on IAEA verification guarantees the agency can no longer provide -- this is a structural constraint on Phase 2 success independent of US-Iran goodwill.

LIKELIHOOD: Iran maintaining functional enrichment capacity with no IAEA visibility: ALMOST CERTAIN. **CONFIDENCE:** HIGH.

LIKELIHOOD: HEU stockpile surrendered or fully verifiably down-blended within 30 days: ALMOST NO CHANCE. **CONFIDENCE:** HIGH.

LIKELIHOOD: Deal framework includes verifiable IAEA access restoration within 60 days: UNLIKELY. **CONFIDENCE:** MODERATE.

ALT HYP

ALT A: Iran covertly down-blended or transferred HEU during blackout as pre-condition signal for deal [unlikely]

Iran offered down-blend in earlier negotiating sessions; some Iranian officials signaled willingness to reduce stockpile optics before a final deal; down-blend removes domestic political liability of visibly holding bomb-grade material during negotiations.

✓ **Supporting Evidence:** No IAEA verification is possible; down-blend offer has been consistently framed as non-binding and non-surrendering; Isfahan tunnel complex assessed as HEU storage site with no observable material drawdown in satellite imagery; historical AEOI pattern is to maximize stockpile during inspection gaps.

✗ **Ruling-Out Evidence:** FDD/ISIS analysis specifically notes the IAEA report is silent on Fordow, Natanz tunnel, and Pickaxe Mountain -- candidate entombment sites where material movement would be hardest to detect.

ALT B: Enrichment activity continued and stockpile has grown beyond the 27-FEB-2026 baseline [roughly even chance]

Fordow and Isfahan underground halls are both assessed as largely intact and operational; 102 days of unmonitored operations provides substantial time for additional enrichment; historical AEOI behavior under inspection gaps is to accelerate production; underground facilities were specifically designed for operational continuity under attack conditions.

✓ **Supporting Evidence:** Active conflict degrades facility staffing, logistics, and power supply; US-Israeli strikes had broad suppressive effect on Iranian nuclear workforce; down-blend offer from Iran signals a desire to reduce the stockpile number if only for optics.

✗ **Ruling-Out Evidence:** No direct evidence of post-28-FEB enrichment activity is accessible to open-source analysis; disruption to Natanz above-ground capacity may have constrained overall output even if underground facilities continued.

CYB-001 | Cisco SD-WAN CVE-2026-20262 | CISA KEV Deadline 29-JUN (5 DAYS REMAINING) | Active Exploitation Confirmed | UAT-8616 Attributed | 8th Cisco SD-WAN Zero-Day of 2026 | No Workaround | KEV Overdue Backlog: 9+ Entries

FLASH | UPDATED | 20

SALUTE

SIZE: CVE-2026-20262: CVSS 6.5 path traversal in Cisco Catalyst SD-WAN Manager (all deployment types: on-prem, Cloud-Pro, FedRAMP). Authenticated attacker with write-level credentials can overwrite OS files -- chain to root. Active exploitation confirmed (CISA + Cisco PSIRT). Federal deadline: 29-JUN-2026 (5 days remaining). No workaround -- upgrade only. Attribution: UAT-8616 (same APT campaign as CVE-2026-20245, deadline 23-JUN). 8th Cisco SD-WAN zero-day of 2026 -- sustained coordinated campaign against SD-WAN management infrastructure. KEV overdue backlog: Check Point CVE-2026-50751 (+13 days, VPN auth bypass, ransomware chain), PAN-OS (+23 days), Arista EOS (+1, no patch planned), Joomla CE (+5 days), SolarWinds Serv-U (+5 days), 9+ total.

ACTIVITY: CISA KEV deadline 29-JUN-2026 (5 days). Exploitation chain: crafted HTTP request to affected API endpoint; file overwrite deploys malicious WAR file via WildFly; JSP shell interaction. Detection: log entries showing path traversal during file upload to vManage API endpoint. KEV overdue backlog represents a significant cumulative risk posture -- Check Point CVE-2026-50751 (+13 days, VPN auth bypass, Qilin ransomware confirmed) is the highest-urgency overdue entry after Cisco. to tournament traffic. 300+ suspicious domains registered pre-tournament. Recorded Future: Iranian hacktivist personas expanded scope/language range -- no confirmed World Cup attack as of 14-JUN but infrastructure "staged and waiting."

LOCATION: Cisco SD-WAN Manager: controls entire SD-WAN fabric -- compromising it gives push-access to every branch edge device under management. Medium CVSS understates downstream blast radius. Check Point CVE-2026-50751 (+13 days) is the highest-urgency overdue entry after Cisco. Tournament venue cities (Atlanta, Miami, LA, Seattle, others); fan zone and online commerce ecosystems.

TIME: Oracle PeopleSoft deadline: TODAY 15-JUN (BOD 26-04). Ivanti Sentry deadline: PASSED 14-JUN. Check Point deadline: PASSED 11-JUN. FIFA World Cup cyber: active now, ongoing through tournament (19-JUL).

EQUIPMENT: Oracle PeopleSoft enterprise applications; Ivanti Sentry mobile gateway; Check Point Security Gateway VPN appliances; Microsoft Windows ecosystem (Patch Tuesday residual); FIFA digital ticketing and payment platforms; Chromium-based browsers.

UNIT: CISA; Oracle PSIRT; Ivanti PSIRT; Check Point PSIRT; Microsoft MSRC; FBI Cyber; Arctic Wolf; Recorded Future Insikt Group.

Why This Cycle

The Check Point CVE-2026-50751 FCEB remediation deadline PASSED on 11-JUN. Any FCEB agency that has not patched or disconnected affected VPN appliances is now in violation of binding federal cyber policy, and the posture shifts from patch-by-deadline to active threat-hunt for compromise. Microsoft Patch Tuesday (10-JUN) released 200+ CVEs in a single day -- record release -- including 3 zero-days with technical details publicly known before patches were available. RoguePlanet PoC published within hours of Patch Tuesday by Nightmare Eclipse, giving adversaries a working exploit the same day defenders received the patch. The combination of Check Point deadline day plus record Patch Tuesday plus active RoguePlanet PoC creates a high-density defender pressure window. Iran-linked cyber actors maintain confirmed ICS/OT campaign against US critical infrastructure (see CYB-001 prior body). Secure Boot certificate expiration deadline 26-JUN is 15 days away.

Summary

CVE-2026-20262: CVSS 6.5 path traversal in Cisco Catalyst SD-WAN Manager (all deployment types). Authenticated attacker can overwrite OS files -- chain to root. Active exploitation confirmed (CISA + Cisco PSIRT). CISA KEV deadline: 29-JUN-2026 (5 days). No workaround -- upgrade only. UAT-8616 attributed (8th Cisco SD-WAN zero-day 2026). KEV overdue backlog: Check Point +13 days ransomware, PAN-OS +23 days, Arista no-patch, 9+ total. Chromium-based browsers (due 23-JUN), an Arista EOS network OS incomplete comparison flaw (due 23-JUN), and a Cisco Catalyst SD-WAN Manager output encoding vulnerability (due 23-JUN). The three-sector sweep in one day is consistent with strategic pre-positioning. The Check Point Security Gateway authentication bypass (CVE-2026-50751, added 08-JUN) reaches its FCEB

mandatory remediation deadline PASSED 11-JUN; active exploitation has been confirmed since May 7 with a Qilin ransomware affiliate linked to at least one confirmed post-compromise case (Rapid7 high confidence). FCEB agencies that have not patched or disconnected are in violation of binding federal cyber policy as of 11-JUN; this is now an active incident-response posture, not a patch-cycle item. MICROSOFT PATCH TUESDAY 10-JUN (RECORD): 200+ CVEs patched -- the largest single Patch Tuesday release in the program history. Three publicly disclosed zero-days: CVE-2026-50507 (BitLocker bypass), CVE-2026-49160 (HTTP.sys DoS, remotely exploitable), CVE-2026-45586 (CTFMON EoP). Within hours of Patch Tuesday release, researcher Nightmare Eclipse dropped a new PoC for RoguePlanet (race condition in Windows Defender, spawns SYSTEM-level shell). 54 RCE vulnerabilities total; 11 RDE CVEs in Remote Desktop Client. Critical: Windows Hyper-V RCE (CVE-2026-47652), Windows Kerberos KDC RCE (CVE-2026-47288). Also: Secure Boot certificate expiration deadline 26-JUN (15 days from today). CISA new Binding Operational Directive consequence-based prioritization shift is live today.

Analyst Assessment

THREE-SECTOR PATTERN: Browser (Chromium V8) plus network OS (Arista EOS) plus SD-WAN management plane (Cisco Catalyst) in a single KEV publishing event covers end-user access, network transit, and remote management simultaneously. This is not the profile of opportunistic criminal exploitation, which typically targets a single high-value vulnerability. The combination is consistent with nation-state pre-positioning to establish persistent access across multiple layers of enterprise architecture before executing a coordinated campaign.

CHECK POINT URGENCY: CVE-2026-50751 Check Point Security Gateway is perimeter VPN infrastructure for thousands of enterprise and government networks. Active exploitation is confirmed. FCEB deadline is TODAY 11-JUN. Any organization -- not just federal agencies -- that has not patched or disconnected the affected appliances should treat this as an active incident response situation, not a patch management cycle item.

GEOPOLITICAL CONTEXT: The active US-Iran military exchange materially elevates the probability that IRGC-nexus or MOIS-affiliated cyber actors are behind some or all of the 09-JUN KEV exploitation activity. Iran has a documented pattern of escalating cyber operations against US critical infrastructure during periods of kinetic confrontation, including the confirmed ICS/OT campaign noted in prior cycles (CISA-FBI-NSA joint advisory April 2026). No attribution has been confirmed by CISA for the 09-JUN entries.

NEW BOD SIGNIFICANCE: The consequence-based prioritization shift is a philosophically sound evolution from counting vulnerabilities to protecting what matters most. Enterprise security teams should monitor the BOD text for publication today and assess whether the prioritization signals align with their own critical asset definitions. Sectors that have already implemented consequence-based approaches will have a head start on compliance.

LIKELIHOOD: Active exploitation of Chromium V8 by criminal or nation-state actors within the FCEB deadline window: VERY LIKELY. **CONFIDENCE:** HIGH.

LIKELIHOOD: Check Point CVE-2026-50751 exploitation of unpatched FCEB agency systems by 11-JUN deadline: LIKELY. **CONFIDENCE:** HIGH.

LIKELIHOOD: Attribution of one or more 09-JUN KEV exploitations to IRGC-nexus actors within 30 days: ROUGHLY EVEN CHANCE. **CONFIDENCE:** MODERATE.

ALT HYP

ALT A: Nation-state (IRGC/MOIS-nexus) exploitation of 09-JUN KEVs as escalation tool during active US-Iran exchange [roughly even chance]

Active US-Iran military exchange provides immediate motivation for IRGC cyber operations against US critical infrastructure; CISA CI Fortify program has been warning of geopolitical-crisis cyber scenarios since May 2026; IRGC-affiliated CyberAv3ngers group already conducting confirmed ICS/OT operations against US water and energy systems (CISA-FBI April advisory); three-sector pre-positioning pattern is consistent with APT methodology.

✓ **Supporting Evidence:** No public attribution for current KEV exploitation has been issued by CISA; attribution to IRGC requires indicators of compromise matching known IRGC tooling; criminal groups independently exploit browser and VPN vulnerabilities routinely for financial gain.

✗ Ruling-Out Evidence: KEV catalog entry describes active exploitation without attribution; CISA has not issued an emergency directive or threat actor attribution for these specific CVEs.

ALT B: Criminal ransomware and extortion groups are the primary exploiters of the 09-JUN KEVs [roughly even chance]

LockBit, Qilin, BlackSuit, and affiliated criminal groups routinely exploit browser engine flaws and VPN authentication bypasses for initial access establishment; broad enterprise surface area (all Chromium-based browsers) maximizes criminal ROI; VPN auth bypass (Check Point) is a classic ransomware initial access vector.

✓ Supporting Evidence: Criminal exploitation is financially motivated and typically targets individual organizations sequentially; simultaneous three-sector pattern covering browser, network OS, and SD-WAN management plane is more consistent with strategic APT pre-positioning than criminal opportunism.

✗ Ruling-Out Evidence: Criminal groups do exploit KEVs immediately after publication; the Check Point VPN vulnerability is particularly consistent with criminal initial access patterns.

SECTION 4A - CYBER & INFORMATION SECURITY

CYB-001 | IRAN-AFFILIATED APT - ACTIVE ICS/OT CAMPAIGN US CRITICAL INFRASTRUCTURE | Water / Energy / Govt PLCs targeted / Confirmed disruptions / CISA capacity reduced by \$707M cuts

HIGH | CONTINUED | 18

Why This Cycle	Standing active threat. CISA-FBI-NSA-DOE-EPA-USCYBERCOM joint advisory (Apr 7) confirmed ongoing Iranian-affiliated APT activity targeting US PLCs and SCADA systems. Op Epic Fury battlefield context sustains Iranian motivation and capability to escalate. Iran restored limited internet access 17-APR after 47-day blackout, enabling external operations.
Summary	A group of Iranian-affiliated advanced persistent threat actors identified as the "CyberAv3ngers" group and affiliated Iran-aligned hacktivist collectives (organized under an "Electronic Operations Room" formed 28-FEB-2026) are actively exploiting internet-facing programmable logic controllers (PLCs) and SCADA display systems across multiple US critical infrastructure sectors. Confirmed targeted sectors: Water and Wastewater Systems (WWS), Energy (power generation and distribution), Government Services and Facilities (local municipalities). The hackers are interacting with data files to alter display data and extracting device project data. Confirmed operational disruption and financial loss have occurred in some victim organizations. Key actor: Handala Hack, an MOIS-affiliated persona, has claimed compromises against an Israeli energy exploration company, Jordan's fuel systems, and conducted healthcare pressure campaigns. CISA institutional capacity to support sector coordination has been materially reduced: \$707M in staffing cuts, the Critical Infrastructure Partnership Advisory Council shuttered, and Multi-State ISAC funding eliminated. CISA has issued advisory guidance for Rockwell Automation PLCs and similar devices.
Analyst Assessment	SUSTAINED CAMPAIGN: The Iranian ICS/OT campaign has been active since at least the 28-FEB 2026 Op Epic Fury launch. It represents a deliberate strategic choice to impose costs on the US at the infrastructure level while conventional military engagement continues in the

Middle East. The campaign is calibrated to stay below the threshold for direct military retaliation.

CISA CAPACITY GAP: The simultaneous reduction of CISA's capacity to support sector coordination through staffing cuts creates a structural vulnerability: the agency responsible for coordinating critical infrastructure cyber defense has reduced capability precisely when the threat is most elevated. This is the most significant institutional gap in the current threat environment.

WATER/WASTEWATER RISK: WWS systems are particularly vulnerable: they operate PLCs that are often internet-facing for remote monitoring, have limited on-site cybersecurity expertise, and serve communities that cannot tolerate extended outages. Confirmed disruptions in WWS operations have already occurred.

TRIPWIRES: (1) Named-victim public disclosure for a US water utility; (2) Confirmed physical consequence (contamination, pump failure, dam control interference) from an ICS/OT attack; (3) CISA issuing an Emergency Directive for specific PLC vendor products; (4) Handala Hack or affiliated actor escalating to US targets beyond prior claimed operations.

LIKELIHOOD: Disruptive ICS/OT incident affecting US utility in next 30 days: **LIKELY**.

CONFIDENCE: MODERATE.

CYB-002 | FBI SURVEILLANCE NETWORK BREACH - CHINESE APT - UNRESOLVED | Phone numbers of surveillance targets potentially exposed

HIGH | CONTINUED | 14

Why This Cycle

No resolution reported. Major cyber incident designation maintained. Congressional notification has been filed. Breach represents a significant counterintelligence compromise.

Summary

The FBI declared a "major cyber incident" in April 2026, providing legally required Congressional notification, after identifying that one of its domestic surveillance systems was compromised. The breach potentially exposed phone numbers of individuals under federal surveillance by federal agents. Chinese intelligence services have been attributed as the actor. The compromised network was unclassified but held sensitive surveillance target information. No resolution or remediation completion has been reported as of this cycle. TechCrunch analysis (07-JUN) identifies this as one of the worst hacks of 2026.

Analyst Assessment

COUNTERINTELLIGENCE IMPACT: Exposure of surveillance target phone numbers enables an adversary to identify who is under US federal surveillance - a high-value intelligence windfall for a state actor. Chinese intelligence could use this data to identify sources, methods, and priority targets of US federal investigations.

LIKELIHOOD: Public attribution to Chinese state actor confirmed: **LIKELY**. **CONFIDENCE:** MODERATE.

SOURCES

[TechCrunch - worst hacks 2026](#)

CYB-003 | FIFA WORLD CUP 2026 - PRE-TOURNAMENT CYBER THREAT ELEVATED | Tournament opens Jun 11 / 13,000+ malicious domains / 260 FIFA employee credentials compromised / Iran-affiliated hacktivist groups specifically flagged

HIGH | NEW | 15

Why This Cycle

Tournament opens June 11 (3 days from publication). Pre-tournament cyber threat window is open now. Multiple intelligence sources have issued specific warnings for this event cycle.

Summary

Fortinet FortiGuard Labs has identified a substantial increase in cybercriminal activity between January and May 2026 targeting FIFA World Cup 2026 infrastructure. Key findings: 13,000+ FIFA-related domains newly registered (potential phishing/malware delivery); 260 FIFA employee credentials discovered in stealer log data; 270,000+ credentials from users of FIFA-

	related websites compromised. Canadian Centre for Cyber Security (CCCS) assessment: the FIFA World Cup 2026 "will almost certainly be targeted by a range of cyber threat actors including cybercriminals, non-state actors, and state-sponsored actors." Primary threats: ticket scams and credential harvesting; ransomware against ticketing and transportation infrastructure; Iran-affiliated hacktivist groups (per Rozin Security tactical bulletin 04-JUN and Canadian Cyber Centre advisory); malicious FIFA-related apps delivering malware; DDoS against match-day broadcast and ticketing systems. World Cup runs June 11 - July 19, 2026 across 16 cities in US, Canada, Mexico.
Analyst Assessment	IRAN-SPECIFIC THREAT: Rozin Security and Canadian Cyber Centre both specifically flag Iran-affiliated hacktivist groups as a threat to tournament infrastructure, given the ongoing US-Iran conflict context. Iran-related matches present the highest political motivation for disruption. The "Electronic Operations Room" (formed 28-FEB) coordinating hacktivist operations represents an organized capability that could be directed against tournament infrastructure. CREDENTIAL COMPROMISE SCALE: 260 FIFA employee credentials in stealer logs represents a pre-positioned access risk. Attackers with legitimate FIFA employee credentials can conduct insider-threat-equivalent operations against tournament systems without triggering external intrusion detection. OPENING MATCH RISK WINDOW: June 11 opening ceremony and first match represent peak risk: maximum global viewership, highest crowd density at venues, peak media attention, and maximum reputational impact of any disruption. This is the single highest-risk window of the tournament for both physical and cyber incidents. LIKELIHOOD: Cyber incident targeting World Cup infrastructure in first 7 days of tournament: LIKELY. CONFIDENCE: MODERATE.

SECTION 4B - PHYSICAL / GEOPOLITICAL / IO

GEO-002 UKRAINE - RUSSIAN DRONE BARRAGE KYIV / MYKOLAIV OVERNIGHT (ISW) Sustained strikes continue / no new US-household-relevant delta this cycle / carried as background watch		MONITOR CONTINUED 10
Why This Cycle	Carried as a background watch item, NOT a fresh FLASH/HIGH development. The only current-cycle delta is an overnight Russian drone barrage on Kyiv and Mykolaiv (ISW), which fits the established pattern of sustained Russian strikes and the dead diplomatic track; there is no new US-household-relevant change this cycle. The war remains a standing thread the suite tracks, so the entry is retained at MONITOR / CONTINUED with the score reduced from 15 to 10 rather than carried at HIGH on stale 07-JUN data (Chornobyl strike, E3 summit, Zelenskyy-Putin rejection), all of which were prior-cycle items. If a US-relevant delta emerges (a confirmed US policy or aid change, a NATO-territory incident, or a strike on a US-linked asset) this returns to a scored HIGH entry.	
Summary	Russia conducted an overnight drone barrage against Kyiv and Mykolaiv (ISW), consistent with the ongoing pattern of sustained long-range strikes. The diplomatic track remains stalled, with US mediation attention shifted to the Middle East. No US-household-relevant change occurred this cycle; the prior-cycle items (the 07-JUN Chornobyl spent-fuel-storage drone strike, the worsening occupied-Crimea supply shortages, the rejected Zelenskyy-Putin meeting, and the London E3 summit) are not repeated here because they carry no current-cycle delta. This entry is retained only as a standing background watch.	
Analyst Assessment	BACKGROUND-WATCH STATUS: No US-household-relevant delta this cycle. The overnight Kyiv/Mykolaiv barrage is pattern-consistent and does not change the assessment. Demoted to MONITOR / CONTINUED, score 15 to 10, pending a genuine US-relevant development. CHANGE FROM PRIOR: Demoted from HIGH/UPDATED to MONITOR/CONTINUED. Prior-cycle drivers (Chornobyl strike, Crimea shortages, Zelenskyy-Putin rejection, E3 summit) are	

no longer current and have been removed; the only new item is the overnight Kyiv/Mykolaiv drone barrage.

LIKELIHOOD: A US-household-relevant Ukraine development in the next 72 hours: UNLIKELY. **CONFIDENCE:** MODERATE.

SOURCES [ISW Russian Offensive Campaign Assessment](#)

GEO-003 | LEBANON CF DAY 8 - HEZBOLLAH REJECTS CEASEFIRE AGREEMENT / UNIFIL PEACEKEEPER KIA / IDF STRIKES CONTINUE

HIGH | UPDATED | 14

Why This Cycle

Hezbollah formal rejection of Israel-Lebanon government ceasefire agreement is new this cycle. UNIFIL peacekeeper KIA is new. Active fighting continuing daily.

Summary

On 03-JUN, Israel and the Lebanese government announced a ceasefire agreement mediated by the US. Hezbollah leader Naim Qassem rejected it outright on 04-JUN: "We are concerned only with a comprehensive cessation of aggression, a ceasefire, and the withdrawal of Israel." A UNIFIL peacekeeper was killed by mortar fire in southeastern Lebanon on 04-JUN; other peacekeepers were wounded. The IDF continued striking Hezbollah facilities in southern Lebanon and Beirut suburbs on 04-05-JUN. Hezbollah conducted rocket attacks against IDF positions. Lebanon's Prime Minister Mikati stated the ongoing fighting is a war "that is not being fought for our sake, but on our land and at the expense of our people." Lebanon has formally banned military activities by Hezbollah - a ban Hezbollah has ignored. By mid-April 2026, 2,000+ had been killed in Lebanon and 1 million+ displaced since the conflict began escalating.

Analyst Assessment

CEASEFIRE FRAMEWORK ASSESSMENT: UK PM Starmer resigned 22-JUN-2026 after losing parliamentary party confidence. Andy Burnham (won Makerfield by-election 18-JUN, 55% vote, 9,200+ majority over Reform) confirmed candidacy; Wes Streeting endorsed Burnham. Near-coronation. Nominations 9-16 JUL; new PM ~18-19 JUL (Eurasia Group). Burnham was sworn in as Makerfield MP on 22-JUN. Caretaker government limits UK binding policy commitments for ~4 weeks during MOU implementation window. Britain will have 7 PMs in 10 years. The CF Day 14 counter reflects the nominal framework only; active fighting has continued throughout this period.

CHANGE FROM PRIOR: Hezbollah ceasefire rejection is new this cycle. UNIFIL peacekeeper KIA is new.

LIKELIHOOD: Genuine Lebanon ceasefire within 14 days: UNLIKELY. **CONFIDENCE:** MODERATE.

SOURCES [NPR - Hezbollah rejects ceasefire](#) | [Time - Hezbollah rejects deal](#)

DOM-001 | NORTHERN IRELAND ANTI-IMMIGRANT RIOTS - DAY 4 | PSNI 16 ARRESTED THIS WEEK / 12 OFFICERS INJURED / WATER CANNON + AEPs DEPLOYED | Unrest 10-JUN LOWER than prior night / PSNI seeking further suspects

HIGH | UPDATED | 16

SALUTE

SIZE: Multi-district riot across Belfast; spread to Glasgow, Edinburgh, Southampton. Water cannons deployed 10-JUN (PSNI Sandyknowes Roundabout and Glengormley). Bus/rail cancelled; schools and businesses closed early.

ACTIVITY: TRIGGER 09-JUN: Hadi Alodid (30, Sudanese asylum seeker) charged with attempted murder after knife attack on Stephen Ogilvie, 22:30 local. Victim lost left eye. RIOTS 09-JUN NIGHT 1: homes, Middle Eastern supermarket, Glider bus, vehicles set ablaze (Crumlin Road, Lower Newtownards Road). NIGHT 2 10-JUN: PSNI water cannons deployed at Sandyknowes Roundabout and Glengormley; water truck set alight at Dept for Infrastructure depot; Alodid remanded in custody via video link. Spread to Glasgow, Edinburgh, Southampton. Belfast City Council suspended all services from 17:30. All five Stormont party leaders issued joint condemnation. US Embassy Demonstration Alert issued 09-JUN.

LOCATION: Belfast (Crumlin Road, Lower Newtownards Road, Sandyknowes Roundabout, Glengormley, Chimney Corner Hotel area); Glasgow; Edinburgh; Southampton.

	TIME: Trigger event 08-JUN (knife attack). Nightly disorder 8-11 JUN. Day 4 as of cycle open: PSNI 16 arrested this week, 12 officers injured, unrest 10-JUN lower than prior night. Pattern: 2025 NI riots ran 9-18 June (9 days), 107 officers injured, 56 arrested. EQUIPMENT: PSNI water cannon vehicles; petrol bombs and incendiary devices (rioters); multiple vehicles and structures destroyed. UNIT: PSNI (Chief Constable Jon Boutcher); Belfast City Council; Stormont executive; NI Fire and Rescue Service.
Why This Cycle	The current-cycle delta is a de-escalation signal: PSNI reports 16 people arrested this week across the back-to-back nightly protests, with the level of unrest on 10-JUN lower than the previous night, though incidents continued and PSNI is seeking further suspects. This is the fourth day since the 8-JUN knife attack (attempted murder, Sudanese suspect charged) on a disabled man in north Belfast that triggered the disorder. Score is reduced from 18 to 16 to reflect the easing trajectory. The 2025 NI riots (the comparison case) ran 9-18 June with 107 officers injured and 56 arrested -- a base rate suggesting several more days of lower-intensity disorder are plausible before full subsidence. For an FFTP US-household audience this remains an international security-watch item with low direct US relevance.
Summary	A knife attack in north Belfast on 08-JUN, carried out by a Sudanese asylum seeker, triggered violent anti-immigrant riots across Northern Ireland that have continued on a nightly basis. Homes and vehicles were torched in multiple districts in the opening nights. By the fourth day (this cycle) PSNI reported 16 arrests for the week and 12 officers injured, with water cannon and attenuating energy projectiles deployed; crucially the unrest on 10-JUN was lower than the prior night, suggesting the disorder may be fatiguing. The US Embassy in London previously issued a Demonstration Alert covering protests in Belfast and across the UK. Northern Ireland First Minister Michelle O'Neill condemned the violence. The victim's own family issued a statement calling for the riots to stop. Senior political figures in Britain including Northern Ireland Secretary Hilary Benn praised members of the public who intervened during the knife attack, but the video of the attack has been spread by far-right social media accounts including Musk, Farage, and Tommy Robinson. No direct connection between the ICA (Irish Citizen Army, new far-right group) and the current riots has been confirmed; the ICA is a background-level organisational presence within the broader Irish far-right ecosystem currently under Garda monitoring.
Analyst Assessment	CHANGE FROM PRIOR: De-escalation. PSNI reports 16 arrested this week and 12 officers injured Wednesday; water cannon and attenuating energy projectiles (AEPs) used. Crucially, unrest on 10-JUN was LOWER than the prior night, indicating the disorder may be fatiguing. PSNI is still seeking further suspects. Score reduced 18 to 16. Prior cycle posture was active multi-city escalation with water cannon first deployed. ESCALATION TRAJECTORY: The 2024 UK riots (Southport, July-August 2024) and the 2025 NI riots (Ballymena, June 2025) both began as localised responses to individual violent incidents involving asylum seekers or migrants and escalated to multi-city disorder within 48-72 hours. The same pattern is active here. The key variable is whether today's Belfast City Hall rally produces additional violence and whether that amplifies beyond Northern Ireland. The joint loyalist-nationalist framing of today's rally is the most important indicator to watch -- if it holds, it signals the anti-immigration frame is overriding the historic sectarian divide, which would represent a significant shift in Northern Irish political dynamics. IO AMPLIFICATION PATTERN: Musk, Farage, and Robinson were cited by NI officials as key amplifiers within hours of the knife attack. This is the identical pattern documented in the 2024 UK riots, where Musk's X platform posts directly preceded new riot locations. The reach of these accounts is global. Social media platforms have not acted to limit amplification. Expect continued spread of calls for protests in UK cities throughout today. ICA CONTEXT: The Irish Citizen Army (ICA) -- a new far-right group that has appropriated the name of the 1913 socialist labour militia -- is a background-level presence within the broader ecosystem but is NOT the operational driver of current events. The ICA is under Garda monitoring including involvement of the anti-terror Special Detective Unit. Its splinter group the Irish Defence Army (IDA) had five members arrested in December 2025 for plotting to attack a mosque in Galway and target migrant accommodation. The ICA's online activity uses AI-generated Marvel superhero imagery and is assessed as primarily online and disorganised at

this stage. However, the current riot environment provides exactly the conditions under which such groups historically attempt to insert themselves as organisational nodes.

US EQUITIES: US citizens in Belfast, Glasgow, and London should exercise caution and avoid protest areas. The US Embassy demonstration alert is an operational signal: US government personnel are being warned. US-Ireland and US-UK relations are not materially affected. The Sudanese national's asylum route (Paris to Dublin to Northern Ireland) will draw attention to the Common Travel Area and may generate political pressure on the Irish government from the UK. Watch for Taoiseach and Irish government response today.

LIKELIHOOD: Continued nightly disorder in Northern Ireland through the weekend: ROUGHLY EVEN CHANCE. **CONFIDENCE:** MODERATE.

LIKELIHOOD: Disorder spreading to additional GB cities within 48 hours: ROUGHLY EVEN CHANCE. **CONFIDENCE:** MODERATE.

LIKELIHOOD: ICA or IDA conducting organised action in Republic of Ireland in conjunction with NI disorder: UNLIKELY. **CONFIDENCE:** MODERATE.

ALT HYP

ALT A: Violence peaks at today's Belfast City Hall rally then de-escalates over 48-72 hrs consistent with prior NI riot cycles [roughly even chance]

Prior NI riot cycles (2024, 2025, 2021) typically peaked in the first 48-72 hours; PSNI has substantial experience managing anti-immigration disorder; victim's family has called for calm; counter-protests and community leaders are active; NI Secretary Benn is making public statements.

✓ **Supporting Evidence:** PSNI has deployed riot units; Government of UK and NI are making statements; community response in prior cycles was effective; the loyalist-nationalist joint framing may not hold if nationalist communities decline to participate.

✗ **Ruling-Out Evidence:** Today's City Hall rally has not occurred yet; joint loyalist-nationalist framing, if it holds, would be a structural escalation beyond prior cycles.

ALT B: Joint loyalist-nationalist rally holds today; disorder spreads beyond Northern Ireland; multi-city unrest comparable to 2024 UK riots develops within 48-72 hrs [roughly even chance]

IO amplification pattern is identical to 2024 UK riots; Musk and Robinson reach is global; 2024 riots spread from Southport to 30+ English cities in 72 hours; anniversary timing (exactly 1 year after 2025 Ballymena riots) is psychologically significant; fuel protest networks and anti-immigration protest networks across Ireland and GB are primed.

✓ **Supporting Evidence:** Counter-protests consistently outnumbered far-right protesters in 2024; UK government rapid prosecution was effective deterrent; NI political leadership is bipartisan in condemning the violence; community resilience in Belfast is high after decades of managing disorder.

✗ **Ruling-Out Evidence:** The loyalist-nationalist joint framing is the key unknown -- if it fractures on sectarian lines it limits spread; PSNI surge capacity is operational.

SECTION 5 - ENERGY / INFRASTRUCTURE / SUPPLY CHAIN

ENERGY / INFRASTRUCTURE MONITORS - 09 JUNE 2026

ENR-001 OIL / ENERGY PRICES: Brent \$74.73/bbl (24-JUN) -- lowest since pre-war. AAA pump \$3.93/gal -- 6-week consecutive decline from \$4.56 peak (21-MAY). Trump announced DOJ investigation into fuel price gouging 24-JUN. FORWARD: Iran chief negotiator declared Hormuz "will never return to prewar conditions and will be administered by Iran." Oman-Iran transit fee discussions -- structural forward risk. Physical normalization 9-12 months (IATA). EU energy ministers meet 26-JUN re strategic aviation fuel reserve releases. nt to fall to \$89/bbl Q4 2026, \$79/bbl 2027, as Hormuz flows resume. Goldman Sachs projects Brent to \$80 Q4 2026. EIA STEO June 2026 -- expects Hormuz normalization by end of July. AAA retail gas ~\$4.00/gal (EIA est). Diesel \$4.80/gal avg 2026. US families estimated to have paid ~\$100B additional costs from military spending and higher oil prices (Fortune). Economy-wide inflation elevated to highest level in nearly 3 years per Fed data.

ENR-002 GRID STATUS: SPC Day 1 ENHANCED: Central High Plains (NE Colorado into SE Wyoming). 2,000-3,000 J/kg MLCAP; 50-60 kt deep-layer shear; supercells capable of VERY LARGE hail (2-4 inch isolated); tornado or two possible; MCS with 75+ mph gusts by evening. SLIGHT: Utah (outflow winds); WI/N Illinois (hail/winds); Florida (pulse storms); Southern Plains (MCV). Day 2 SLIGHT: KS/OK/Ozarks -- tornado threat elevated evening hours as LLJ strengthens. itor SWPC for potential GIC if CME delivers Kp 3-5 late 23-JUN/23-JUN. NRC: no emergency class events this cycle.

ENR-003 MARITIME SUPPLY CHAIN: Baltic Capesize BCI C3 charter rates firmed to \$36.90/mt by end of week 05-JUN after strong ECSA/West Africa to China activity drew down prompt tonnage. Panamax market continued upward trend. Container rates elevated on Asia-US corridors; DHL launched dedicated Asia-US widebody 777F service 01-JUN (three flights/week, Hanoi-Taipei-Anchorage-Chicago-Cincinnati) as direct response to Hormuz ocean freight disruption. Panama Canal: operating normally. Suez Canal: operating; some carriers maintaining Cape of Good Hope routing.

SECTION 6 - AVIATION / TRANSPORTATION

AVIATION / TRANSPORTATION MONITORS - 09 JUNE 2026

AVN-001 MIDDLE EAST / HORMUZ AIRSPACE: Iran-conflict routing disruptions remain in effect. Air Canada, Lufthansa Group, and KLM have reduced Europe schedules for June 2026. Gulf region carrier recovery is uneven. Dubai availability varies by carrier. American Airlines suspending some summer routes due to jet fuel cost increases. IATA 82nd AGM held Rio de Janeiro 06-09-JUN; industry setting priorities in one of the most complex operating environments in recent years. Transpacific and Europe routes have reduced seat capacity vs. summer 2025.

AVN-002 WORLD CUP TRANSPORTATION SECURITY: World Cup 2026 opens June 11 across 16 cities in US, Canada, Mexico. Andrew Giuliani (White House FIFA Task Force): "This entire country's police force is leaning in. It is an unbelievable problem set." Philadelphia deploying sanitation vehicles to block intersections as vehicle-as-weapon mitigation. Airport security enhanced at tournament city airports. No specific credible threat identified as of publication. See also STSB-001 (SEC 11) for full soft target assessment.

SECTION 7 - METEOROLOGICAL WEATHER / SEVERE WEATHER / FIRE WEATHER

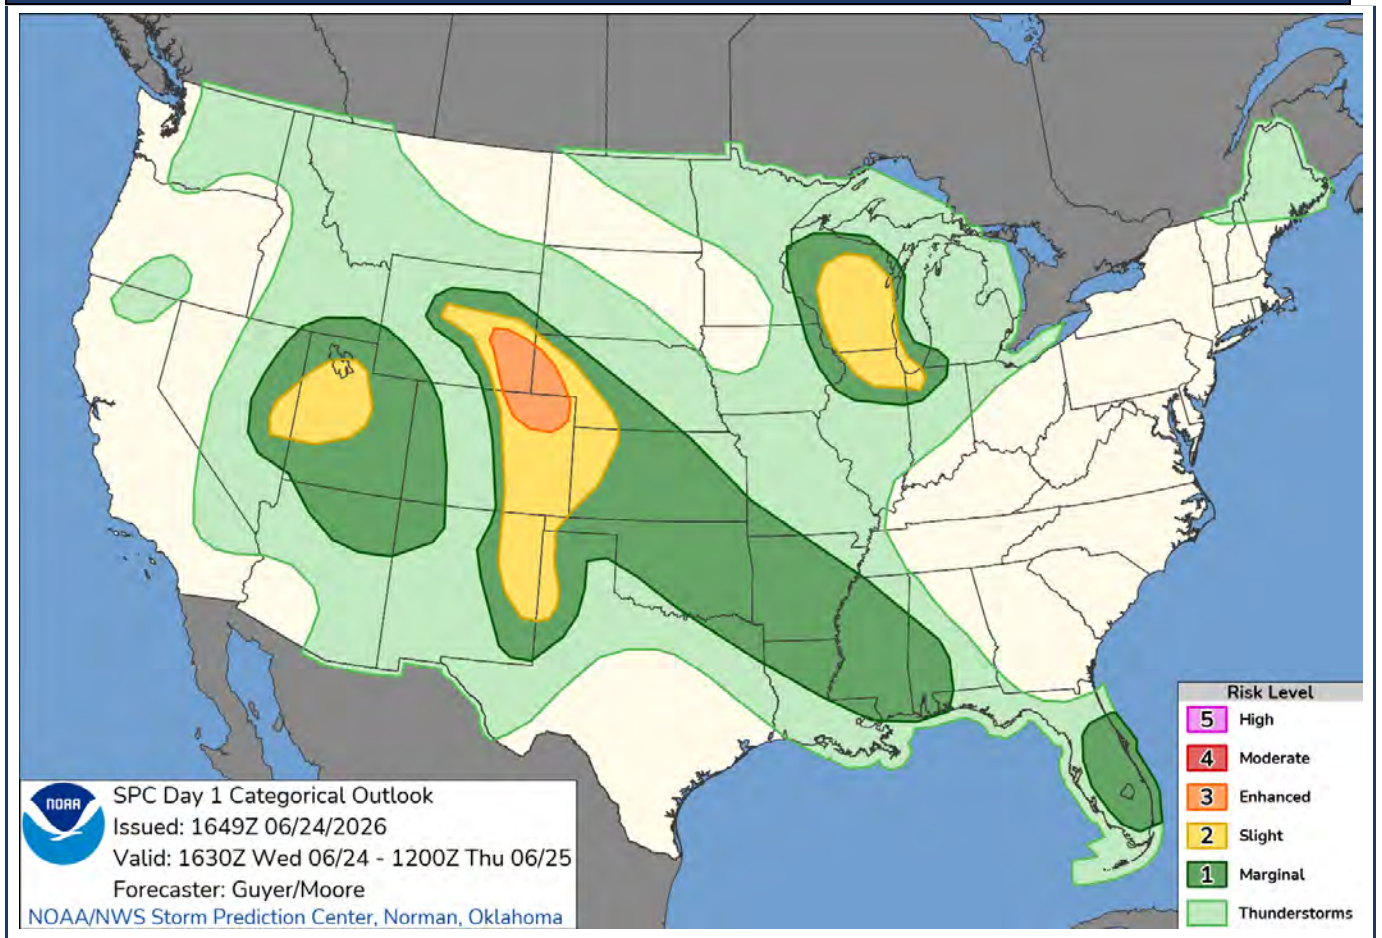

WX-001 | SPC DAY 1 ENHANCED: Central High Plains (NE Colorado / SE Wyoming) | Very Large Hail 2-4 Inch Isolated, 75+ mph MCS Gusts Tonight, Tornadoes Possible | **SLIGHT:** Utah / Wisconsin-N Illinois / Florida / S. Plains-ArkLaTex | **DAY 2 SLIGHT:** KS-OK-Ozarks -- Evening Tornado Threat Elevated Tuesday update]

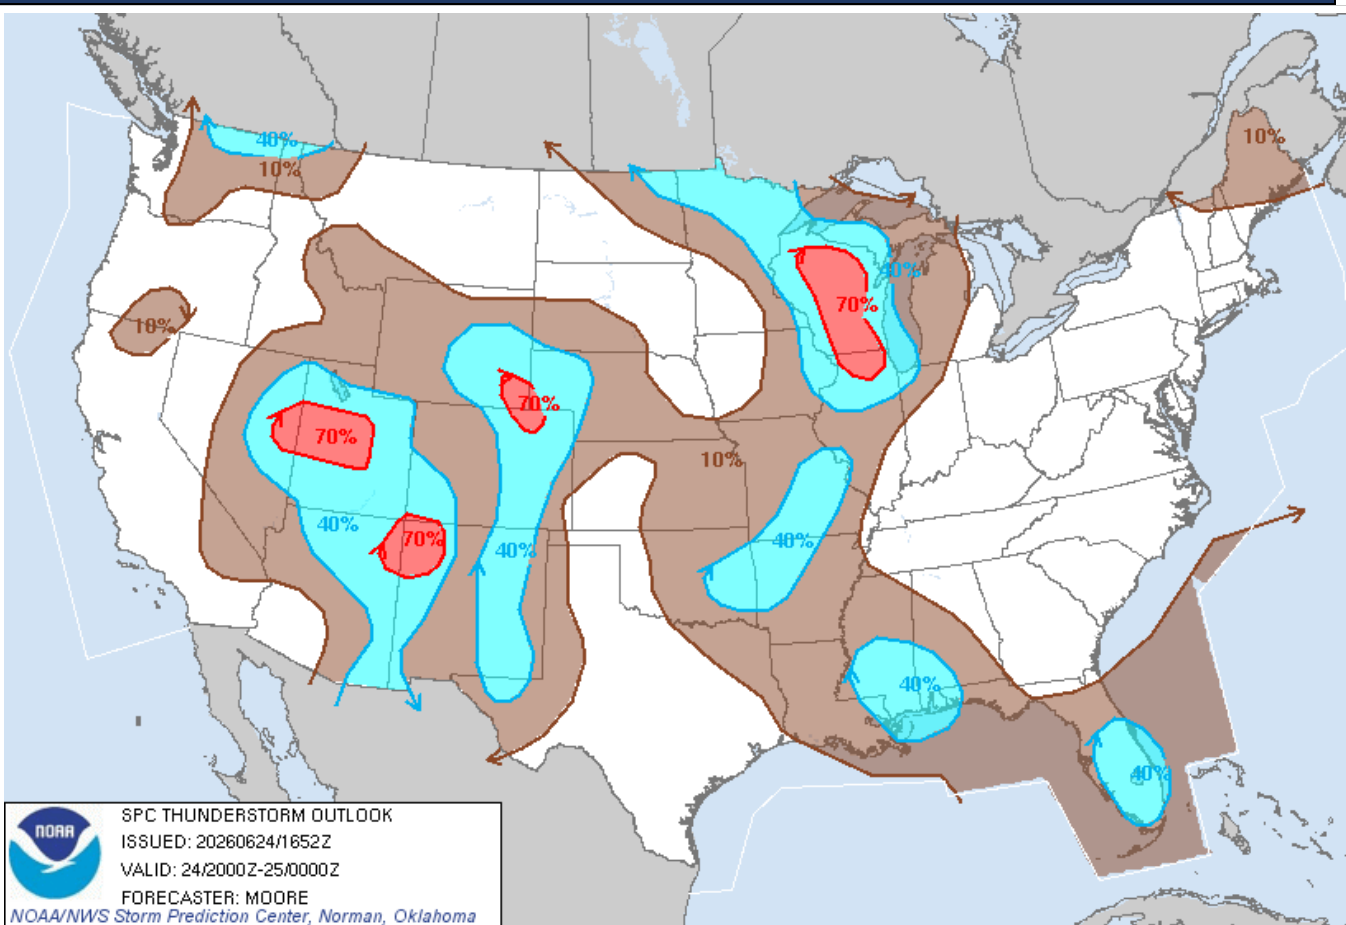

HIGH | ACTIVE TODAY | 14

SALUTE

SIZE: SPC Day 1 (241300Z-251200Z): ENHANCED: Central High Plains (NE Colorado into SE Wyoming). SLIGHT: Utah Great Basin (outflow winds); Wisconsin into N Illinois

	(hail/winds); Florida Peninsula (pulse storms); S. Oklahoma/ArkLaTex (MCV); N Louisiana (clusters). Day 2 SLIGHT: Central/Southern High Plains + southern Kansas/N Oklahoma into Ozarks. Tornado threat elevated evening hours as LLJ strengthens. ACTIVITY: ENHANCED (NE CO / SE WY): 2,000-3,000 J/kg MLCAPE by mid-afternoon; deep-layer shear 50-60 kt; strong hodograph curvature supports supercells. Large to VERY LARGE hail (2-4 inch isolated); tornado or two possible; upscale MCS growth into eastern CO/western KS by evening with 75+ mph gusts. SLIGHT UTAH: High-based dry thunderstorms; primary risk severe outflow winds. SLIGHT WI/N IL: 40-50 kt mid-level flow; hail and damaging winds. SLIGHT FLORIDA: Pulse storms, occasional damaging downburst winds. SOUTHERN PLAINS: MCV from N OK/S KS toward ArkLaTex; re-intensification possible; isolated hail/winds. LOCATION: ENHANCED: NE Colorado (Weld/Larimer/Logan counties) into SE Wyoming (Laramie/Albany County). MCS track: eastern CO / western KS tonight. SLIGHT: Utah Great Basin; WI/N Illinois; Florida interior/Atlantic Coast; Southern Plains/ArkLaTex. Fire Weather CRITICAL: Western and central Utah (dry thunderstorms today). TIME: Day 1 valid 241300Z-251200Z. Peak severe weather: mid-late afternoon NE CO/SE WY; MCS development evening hours. Southern Plains/ArkLaTex: afternoon into early evening. Day 2 SLIGHT valid 251200Z-261200Z: evening tornado threat KS/OK/Ozarks. EQUIPMENT: KS-Ulysses WXN81 OOS (Dodge City WFO) during today's active Southern Plains convection -- Grant/Stanton/Haskell counties. IL-Hillsboro KXI79 OOS. NM triple-gap (Artesia/Roswell/Carlsbad all OOS). WEA, NOAA Weather App, and EAS broadcast radio are alternate pathways in all gap zones. UNIT: SPC Norman OK; NWS Pueblo CO; NWS Cheyenne WY; NWS Dodge City KS; NWS St. Louis MO; NWS Tampa FL; NWS Lake Charles LA.
SPC Day 1 Convective Outlook	SPC Day 1 Convective Outlook (issued 0755 AM CDT 24-JUN-2026, valid 241300Z-251200Z): ENHANCED risk Central High Plains -- supercells with large to very large hail (2-4 inch isolated), possible tornadoes, 75+ mph MCS wind threat tonight. SLIGHT: Utah outflow winds; WI/N Illinois hail/winds; Florida pulse storms; Southern Plains MCV. Source: NOAA SPC spc.noaa.gov.

SPC Day 2 Convective Outlook

SPC Day 2 Convective Outlook (issued 0058 AM CDT 24-JUN-2026): **SLIGHT:** Central/Southern High Plains + southern Kansas/N Oklahoma into Ozarks. Tornado threat elevated evening hours as LLJ strengthens over Oklahoma and southern Kansas. MCS morning activity from today expected in Kansas through Thursday morning. Eastern Ohio to southern NY: 5% wind probabilities from compact mid-level jet.S. Severe thunderstorms are **LIKELY** across portions of the central Plains vicinity from Saturday afternoon into Saturday evening. Large to very-large hail, severe winds (some 75+ mph), and tornadoes are possible. Mid-level ridge de-amplifies emerging from Rockies; strong lee cyclogenesis eastern CO; frontal zone near southern NE; dryline extending south into southern Plains. Low-level flow strengthens Saturday as lee cyclone deepens, supporting northward moisture transport and destabilization across KS, NE CO, SW NE. Afternoon: storm development along uncapped dryline in E CO and W KS; supercell mode dominant. By evening: supercells congeal into MCS tracking SE into central/eastern KS with increasing wind threat (75+ mph gusts) and QLCS/embedded supercell tornado risk. Source: NOAA SPC spc.noaa.gov.

Arthur Aftermath Summary

FORWARD FIRE WEATHER WARNING (Friday-Saturday): Both Day 1 and Day 2 SPC fire weather outlooks carry an unusual forward warning: "A major, seasonally abnormal trough arriving Friday into Saturday, bringing widespread and significant critical fire weather conditions with southwest winds gusting above 40 mph ahead of a strong cold front." Any lightning holdover ignitions from today's dry thunderstorm activity over Utah or tomorrow's Four Corners activity could rapidly expand under Friday-Saturday conditions. Fire managers should pre-position resources before Thursday evening.

NWR OUTAGE NOTE

23 transmitters OOS/DEGRADED (net +5 from prior cycle). HIGH-GAP ALERTS: KS-Ulysses WXN81 OOS during today's active severe weather (Grant/Stanton/Haskell counties); IL-Hillsboro KXI79 OOS (Montgomery/Bond/Fayette/Macoupin); NM triple-gap (Artesia/Roswell/Carlsbad all OOS during active fire season); AK cluster 5 affected (Kotzebue DEG + Zarembo/Mt Robert Barron/Mt McArthur DEG + Point Pigot NEW OOS); CA-Santa Ana NEW OOS; MA-Leyden NEW OOS; NC-Statesville NEW OOS; TX-Ozona and TX-Rio Grande City NEW OOS. IN-Angola improved OOS to DEGRADED. Residents in gap zones: rely exclusively on WEA mobile alerts, NOAA Weather App, and EAS.

Analyst Assessment

TODAY'S THREAT CHARACTER: The NE Colorado/SE Wyoming corridor is the highest concern today. 2,000-3,000 J/kg MLCAPE with 50-60 kt deep-layer shear is classic supercell parameter space. Very large hail (2-4 inch isolated) causes catastrophic damage to vehicles and structures. Residents in Weld, Larimer, Logan counties CO and Laramie, Albany counties WY should have shelter plans ready by mid-afternoon and WEA alerts enabled. MCS development tonight extends wind threat into eastern Colorado and western Kansas. robust downburst-producing storms. Day 2 ENHANCED Central Plains is the more significant threat this cycle -- supercell outbreak potential Saturday warrants preparedness now.

WORLD CUP VENUE WEATHER TODAY (19-JUN): TODAY (24-JUN) World Cup matches: Mexico City (Estadio Azteca, 9 PM ET) and Monterrey (BBVA, 9 PM ET) -- no

severe weather threat. Vancouver (BC Place, 3 PM ET) and Seattle (Lumen Field, 3 PM ET) -- no significant weather threat, Pacific marine layer. Miami (Hard Rock Stadium, 6 PM ET) and Atlanta (Mercedes-Benz, 6 PM ET) -- no significant weather threat today. ENHANCED risk zone (NE CO/SE WY) has no World Cup matches today.

FIRE WEATHER TODAY AND TOMORROW: Day 1 Fire Weather CRITICAL: Western and central Utah -- upper-level shortwave trough triggering high-based DRY THUNDERSTORMS today. Critically dry fuels; pyrocumulus development possible; potentially strong outflow winds. Precipitable water climbing to ~1.0 inch by evening (transitioning from dry to wet mix near I-15 by evening). ELEVATED: NW Colorado/NE Utah/SW Wyoming (45-50 kt mid-level flow, 15 mph WSW winds, RH 10-15%); Central-Eastern Nevada (25-35 kt mid-level flow, RH 10-15%). Day 2: Subtropical moisture continues east; scattered high-based thunderstorms Four Corners region. FORWARD CRITICAL (Friday-Saturday): Major trough bringing widespread critical fire conditions with SW winds gusting above 40 mph. NIFC NPL 3; 31 large fires uncontained; 5,900 personnel; 3 CIMTs. YTD 34,262 fires / 2.7M acres.

LIKELIHOOD: Significant severe weather event (reports of damage) in NE Colorado or SE Wyoming today: LIKELY. **CONFIDENCE:** MODERATE.

LIKELIHOOD: Significant tornado event (EF2+) in ENHANCED risk area today: ROUGHLY EVEN CHANCE. **CONFIDENCE:** HIGH.

National Status

NIFC National Preparedness Level (NPL): 2 of 5 as of 14-JUN IMSR 0730 MDT. 10 uncontained large fires nationally; 2,559 personnel committed; 1 CIMT assigned (South Fork Fire, Nebraska). YTD: 31,511+ wildfires (~140% of 10-yr avg); ~2.5 million acres (~195% of 10-yr avg). South Fork Fire (Nebraska, Soldier Creek Wilderness, Nebraska National Forest) is the most significant active incident with evacuation orders in place. SWCC (Southwest) most active GACC: 3 fires, 38,632 cumulative acres, 671 personnel. Source: NIFC National Fire News, nifc.gov/fire-information/nfn.

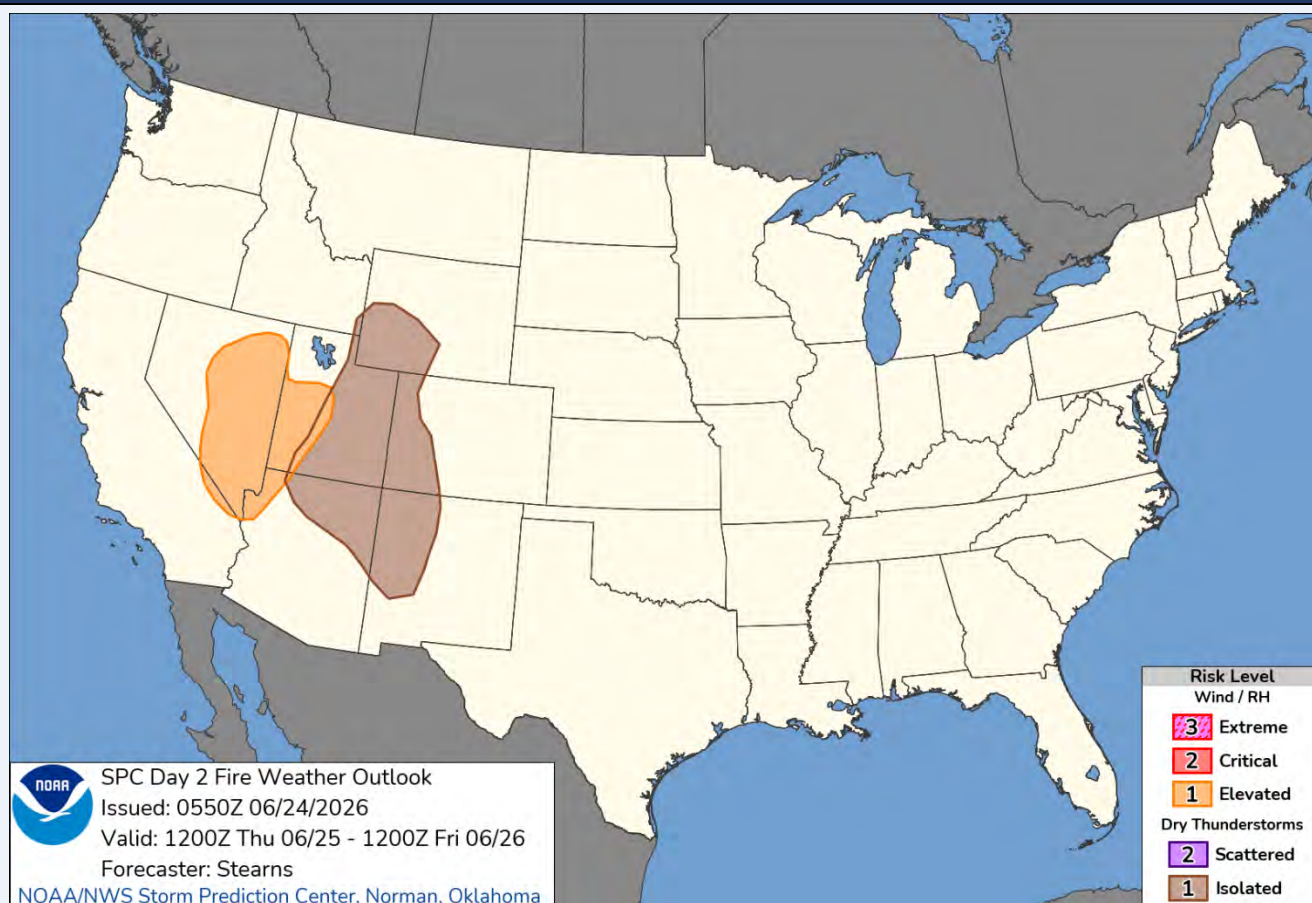

SPC Fire Weather Day 1

SPC Day 1 Fire Weather Outlook (valid 151200Z-161200Z, issued 0144 AM CDT 16-JUN-2026): Between a large-scale trough encompassing the eastern two-thirds of the CONUS and an upper ridge over the West, a robust midlevel speed max will overspread the northern/central Plains during the day. Along/behind the cold front/surface trough, ample diurnal heating will result in a well-mixed boundary layer with 15-20 percent RH expected across parts of eastern Wyoming into the Nebraska Panhandle and vicinity. Enhanced low/midlevel flow along the periphery of the passing speed max and tightening pressure gradient will result in 15-25 mph sustained northwesterly surface winds -- elevated to locally critical fire-weather conditions. Additionally, strong terrain-driven winds (15-20 mph, locally greater in gap-flow areas) and 10-15 percent RH will promote locally elevated fire weather conditions across parts of the eastern Great Basin, Four Corners, and Central Rockies. Source: NOAA SPC spc.noaa.gov. [Operator-supplied SPC Day 1 Fire Weather map image to follow.]

SPC Fire Weather Day 2

SPC Day 2 Fire Weather Outlook (valid 161200Z-171200Z, issued 0144 AM CDT 16-JUN-2026): Along the northeastern periphery of an upper ridge, a midlevel trough and accompanying 70-80-kt speed max will advance southeastward across the Northwest and northern Rockies on Tuesday. **NORTHERN INTERMOUNTAIN WEST** (elevated to locally critical): strong deep-layer west-northwesterly flow with 15-25 mph sustained westerly surface winds amid 15-20 percent afternoon RH over increasingly dry/receptive fuels. Locally critical conditions most likely in gap-flow areas through the Cascades and Snake River Plain. **EASTERN GREAT BASIN INTO THE ROCKIES AND ADJACENT PLAINS** (broadly elevated): breezy/gusty west-northwesterly surface winds with single-digit to lower-teens RH yield broad elevated fire-weather conditions. Stronger sustained winds (~20-25 mph) over southern Wyoming where locally critical conditions are possible. Locally critical also in terrain-favored areas throughout the elevated area. Source: NOAA SPC [spc.noaa.gov](https://www.spc.noaa.gov). [Operator-supplied SPC Day 2 Fire Weather map image to follow.]

Active Fire Areas (14-JUN IMSR / InciWeb)

NEBRASKA: South Fork Fire (Soldier Creek Wilderness, Nebraska National Forest, Pine Ridge RD): ignited 09-JUN; evacuation orders and closures in effect; Rocky Mountain Complex IMT committed. Most significant new-evacuation incident this cycle.

NEW MEXICO: Seven Cabins Fire (Lincoln NF, 13 mi NE of Capitan): minimal fire behavior, smoldering; numerous structures threatened; area/road/trail closures; complex IMT. Bear Fire (Gila NF, 18 mi SE of Quemado): ~150 acres, running/flanking/spotting, structures threatened. NM triple-gap NWR (Artesia WXN24 / Roswell WWG36 / Carlsbad WWF37 all OOS) leaves Chaves and Eddy counties without primary NWR alerting during active fire season.

SOUTHWEST AREA (SWCC most active GACC): 3 fires, 38,632 cumulative acres, 671 personnel. Today's Day 1 fire weather conditions (elevated-to-critical WY/NE Panhandle; elevated Great Basin/Four Corners) apply directly to this GACC's active fire country.

ALASKA: Multiple fires in the Galena Zone (BLM) area including Kopshesut; structures threatened. SE Alaska: 12 Juneau-cluster NWR transmitters DEGRADED further compounds wildfire alerting in AK.

Analyst Assessment

SEASON TRAJECTORY: At 195% of the 10-year average for acres burned with NPL at 2 of 5, the 2026 fire season is running significantly above historical norms. Sustained drought across the Southeast (99% in drought) and Southwest, combined with above-normal temperatures, supports continued elevated risk. The season peak in the Rocky Mountain and Pacific Northwest regions typically arrives July-August; current indicators suggest that peak may arrive earlier or with greater intensity.

IPAWS/NWR GAPS IN FIRE COUNTRY: The NM triple-gap NWR outage (all three transmitters covering Chaves/Eddy/Lincoln counties OOS) is specifically notable given Seven Cabins Fire activity in Lincoln County and active fire restrictions. Residents and

firefighting operations in this area must rely on WEA mobile alerts, FEMA App, and radio broadcast EAS exclusively.

DRY-THUNDERSTORM IGNITION WATCH: The Day 2 (13-JUN) SPC Fire Weather highlights mostly dry, high-based thunderstorms over the southern/eastern Great Basin into the central Rockies, with inverted-V soundings favoring strong/erratic outflow gusts and lightning ignitions on critically dry fuels. This is the primary new-start mechanism to watch over the next 48 hours, layered on the elevated-to-critical Day 1 conditions already present across the eastern Great Basin and central Rockies.

LIKELIHOOD: New fire starts in the eastern Great Basin / central Rockies critical-fuel zone over the next 48 hours: **LIKELY**. **CONFIDENCE:** MODERATE.

LIKELIHOOD: National Preparedness Level escalation to NPL 3 before end of June: **ROUGHLY EVEN CHANCE**. **CONFIDENCE:** MODERATE.

NM triple-gap (Artesia/Roswell/Carlsbad all OOS) leaves Chaves/Eddy counties without NWR during today's active fire weather. TN-Shelbyville WXK63 OOS (Nashville) -- Bedford/Marshall/Coffee counties.

SECTION 7B - WILDFIRE
WILDFIRE STATUS - 24 JUNE 2026 NIFC NPL 3 (raised 19-JUN-2026) 31 LARGE FIRES ACTIVE 77 NEW FIRES YESTERDAY 5,900 PERSONNEL 3 CIMTs YTD: 34,262 FIRES / 2.7M ACRES -- EXCEEDS 10-YR AVG BOTH METRICS

COTTONWOOD FIRE (UT): ACTIVE -- near Beaver, UT; Utah DOF Central Area. Extreme fire behavior: wind-driven runs and spotting. Numerous structures threatened. Evacuations and road closures. Iron Fire (UT): ACTIVE -- 1 mi NW Eureka, UT. CIMT (GB Team 3). Extreme: uphill runs, spotting, crown runs. Evacuations. Grapevine Fire (NV): 10 mi SE Caliente, NV. Extreme. BLM Ely. Kane Springs Fire (NV): 17 mi SW Caliente, NV. Extreme. Pocket Fire (AZ): 7 mi N Sedona, AZ. CIMT (SW Team 2). Evacuations. Lytle Fire (OR): 3 mi S Vale, OR. BLM. Extreme. Garred Road Fire (WA): 4 mi W Coulee City, WA. Structures threatened. Starry Fire (AK): 1 mi S Anderson, AK. Railroad infrastructure threatened.

FIRE-002 SHORE FIRE (CA): ACTIVE -- 2 mi west of Calimesa CA; Riverside Unit Cal Fire. Grass and brush. Minimal fire behavior with smoldering, creeping and backing. Structures and railroad infrastructure threatened. Status per IMSR 18-JUN. **FIRE-003 MATEO FIRE (CA):** ACTIVE -- 10 mi north Camp Pendleton; DOW. Chaparral, grass and brush; isolated torching.

NATIONAL OUTLOOK: NIFC NPL 3 of 5 (raised 19-JUN-2026, per NIFC National Fire News 24-JUN). 31 large fires uncontained; 77 new fires yesterday; 6 new large fires; 5,900 personnel assigned; 3 CIMTs. YTD: 34,262 fires (exceeds 10-yr avg); 2.7 million acres (exceeds 10-yr avg). 7-day significant fire potential: above-normal Great Basin, Southwest, and Northwest. **FORWARD:** Major trough Friday-Saturday -- widespread critical fire conditions 40+ mph SW winds. **SOURCES** per §0.117: NIFC National Fire News nifc.gov/fire-information/nfn (NPL source of record); NIFC IMSR nifc.gov/nicc-files/sitreprt.pdf; SPC spc.noaa.gov/products/fire_wx/.

SECTION 7C - SPACE WEATHER & EMCOMM

SWX-001 | SWX-CON 3 WATCH | ALTEF3 SUBSIDING (607 pfu, BELOW 1000 THRESHOLD) | CME FROM M6.8 AR4473 21-JUN DID NOT ARRIVE | Kp MAX 2 | NO GEOMAGNETIC STORM | R1-R2 FLARE POTENTIAL 30-35% | CHANGE FROM PRIOR: DOWNGRADE FROM SWX-CON R2 MODERATE

WATCH | UPDATED -- DOWNGRADE | WATCH

SWPC Status (24-JUN 1343Z)	NSTR. No alerts or warnings active as of 1343Z 24-JUN-2026. All SWPC thresholds below action levels. Source: NOAA SWPC swpc.noaa.gov) DID NOT ARRIVE as a geomagnetic storm. ALTEF3 SUBSIDING: GOES-19 integral ≥ 2 MeV electron flux 23-JUN range 65-681 pfu (threshold 1000 pfu); current 607 pfu. No threshold breach this cycle. ALTEF3 Serial 3703 (18-JUN): no formal cancel issued by SWPC but event is effectively over per observed flux. Forecast max Kp Jun 23-25: 4.00 (below G1). No geomagnetic storm expected. Solar radiation: no S1+ events; 5% S1 probability per day. Radio blackout: no R events past 24 hours; R1-R2 30-35% per day due to AR4473 flare potential.
Why This Cycle	CHANGE FROM PRIOR -- DOWNGRADE: The M6.8 flare (21-JUN AR4473) carried a Type II emission (380 km/s) suggesting a possible CME -- that CME DID NOT ARRIVE and produced no geomagnetic storm. Kp max 2 today. ALTEF3 flux has NOT crossed 1000 pfu threshold at any point this reporting cycle (range 65-681 pfu). The ALTEF3 event from 13-JUN has wound down below alert threshold. ALTEF3 no longer provides basis for COMCON elevation. AR4473 retains flare potential (30-35% R1-R2) -- watch item only.
Summary	SWX-CON 1 NORMAL. No active alerts or warnings. 2 probability 30-35% per day from AR4473 flare potential. ALTEF3 STATUS: Serial 3703 issued 18-JUN -- no formal cancel. But GOES-19 integral ≥ 2 MeV flux has not crossed 1000 pfu threshold at any point during this reporting cycle (22-JUN 1530Z to 23-JUN 1530Z). Today range: 65-681 pfu. Current: 607 pfu and oscillating. The ALTEF3 event from 13-JUN has effectively subsided. COMCON basis revised: ALTEF3 ACTIVE removed; NWR/theater EW maintain COMCON 4. CME from 21-JUN M6.8 flare: no arrival confirmed. No aurora, no HF degradation, no GIC risk this cycle.
Operational Impacts	HF RADIO: No HF degradation associated with this event. ALTEF3 is a radiation belt electron event, not a geomagnetic or X-ray event. HF conditions are within normal seasonal parameters. No solar flare or X-ray enhancement noted. Standard propagation expected on all HF bands.

	GPS / NAVIGATION: No ionospheric GPS degradation associated with this ALTEF3 event. Quiet geomagnetic conditions mean GNSS accuracy is within normal parameters. No polar route HF or navigation issues expected. POWER GRID: No GIC (geomagnetically induced current) risk this cycle. ALTEF3 electron events do not drive GIC -- that risk is associated with geomagnetic storms (K-index elevation). Grid operations normal. SATELLITE OPERATIONS: PRIMARY RISK THIS CYCLE: Surface charging and deep dielectric charging on satellites at geosynchronous orbit. Sustained high-energy electron flux (>1000 pfu Day 6) increases risk of electrostatic discharge events on GEO satellites. Satellite operators should monitor for anomalous charging signatures. GOES-19 is the primary SWPC monitoring asset. LEO satellites experience elevated drag only during geomagnetic storms -- not applicable this event. AURORA: No aurora expected this cycle. No geomagnetic storm is active. Aurora requires elevated K-index (geomagnetic disturbance) -- not present in current ALTEF3-only event.
HF / COMMS Assessment	All HF bands: NORMAL -- No degradation associated with ALTEF3. Standard propagation in effect. EMCOMM operators: no special band selection required this cycle due to space weather. Monitor SWPC for any new geomagnetic alerts that could change this assessment. ALTEF3 context: electron belt events are primarily a satellite risk, not a surface communications risk. Duration note: this event is now Day 6 -- persistence above average; if a CME or solar flare coincides with existing enhanced electron belt, compound effects are possible. No imminent CME threat identified.
Analyst Assessment	PRIMARY CONCERN THIS CYCLE: Elevated electron flux (ALTEF3 Day 6) is a satellite operations issue, not a surface or EMCOMM issue. The relevant audience is satellite operators and space system program managers. No action required for ground-based emergency communicators or utility operators this cycle based on SWX conditions alone. DURATION AND PERSISTENCE: Day 6 of continuous ALTEF3 is notable. Most electron enhancement events resolve within 1-4 days. Extended events (5+ days) can result in deeper charging penetration in dielectric satellite materials. SWPC has not cancelled -- monitor swpc.noaa.gov for Serial 3704 or cancellation. If a new CME or geomagnetic storm develops while electron belt is already enhanced, compound GEO satellite risk would elevate. CURRENT STATUS: CHANGE FROM PRIOR: ALTEF3 SUBSIDING. Flux 607 pfu (below 1000 threshold). CME NO ARRIVAL. Kp max 2. No geomagnetic storm. No proton event. No HF degradation. No aurora. No GIC risk. AR4473 watch: R1-R2 flare potential 30-35%. SWX-CON downgraded from R2 MODERATE to SWX-CON 3 WATCH. LIKELIHOOD: ALTEF3 event resolving within 24-48 hours: ROUGHLY EVEN CHANCE. CONFIDENCE: LOW. LIKELIHOOD: GEO satellite anomaly attributable to ALTEF3 charging event: UNLIKELY but non-zero given Day 6 duration. CONFIDENCE: LOW.

SECTION 8 - AGRICULTURE / FOOD & SUPPLY CHAIN

NIFC NPL 3 of 5 (raised 19-JUN-2026) 31 Uncontained Large Fires 77 New Fires Yesterday 6 New Large Fires 5,900 Personnel 3 CIMTs YTD: 34,262 Fires / 2.7M Acres -- Exceeds 10-yr Avg Both Metrics Source: NIFC National Fire News (nifc.gov/fire-information/nfn)cres SPC Day 2 CRITICAL N AZ/S UT \$0.117 MANDATORY: nifc.gov/fire-information/nfn	ELEVATED UPDATED 10
Why This Cycle	NIFC National Fire News (Friday NFF cycle): NPL 3 of 5 (raised 19-JUN-2026, source: NIFC National Fire News nifc.gov/fire-information/nfn). As of NIFC 24-JUN: 31 large fires uncontained nationally; 8 new large fires; 33,349 YTD wildfires (135%+ of 10-year average);

	2,627,549 YTD acres burned (166% of 10-year average). SPC issued CRITICAL fire weather for far northern CA, extreme southern OR, and NW Nevada today with dry thunderstorm lightning risk. Day 2 CRITICAL for Four Corners region (single-digit RH possible). South Fork Fire (NE) remains the most operationally significant incident with CIMT and active evacuations.
Summary	NIFC IMSR 18-JUN 0753 MDT: 27 large fires being suppressed nationally; 8 new large fires 18-JUN. YTD: 33,349 wildfires (135%+ of 10-yr avg); 2,627,549 acres; 4,988 personnel assigned. National Preparedness Level 2 of 5. ACTIVE FIRES OF NOTE: (1) South Fork Fire (NE, Nebraska NF) -- 12 mi west of Crawford; CIMT RM Team 2 committed; grass/timber; minimal fire behavior with flanking/backing/creeping; numerous residences threatened; evacuations in place. (2) Iron Fire (UT, Eureka area) -- CIMT assigned -- extreme fire behavior -- evacuations in effect; Grapevine Fire (NV) and Kane Springs Fire (NV) -- extreme; Pocket Fire (AZ, Sedona) -- CIMT assigned; Lytle Fire (OR) -- extremetures and railroad infrastructure threatened. (3) Garred Road Fire (WA) and Starry Fire (AK) also active. CA -- 10 mi north; DOW; chaparral/grass/brush; isolated torching. FIRE WEATHER: SPC Day 1 CRITICAL -- far northern CA + extreme southern OR + NW Nevada; dry southwesterly flow 15-20 mph; RH 10-15%; high-based dry thunderstorm lightning risk (ERCs 80-90th percentile). Elevated: Great Basin to Four Corners. Day 2 CRITICAL -- Four Corners; near single-digit RH, 15-20 mph WSW winds; Elevated Pacific Northwest (Cascade lee). §0.117 SOURCES: NIFC National Fire News (nifc.gov/fire-information/nfn) -- NPL 2 as of 15-JUN sustained; IMSR 18-JUN; SPC Day 1/2 Fire Weather Outlooks.
Analyst Assessment	COMPOUNDING STRUCTURE: The combination of drought, above-average fire season, Hormuz-driven fertilizer cost increases, and elevated fuel costs (transportation and mechanized agriculture) creates a structural compounding risk to 2026 harvest projections that will not resolve within this cycle. SOUTHEAST DROUGHT SEVERITY: The SE drought at record levels (records to 1895) for the Sep 2025 - Mar 2026 period represents an exceptional multi-month agricultural disruption. Combined with reduced NWR coverage across the Southeast (NC Ellerbe OOS, GA Baxley OOS), the region has compound infrastructure and informational gaps. GLOBAL FOOD SECURITY TRAJECTORY: The WFP March forecast that 45 million people could become acutely food insecure if oil prices remain ~\$100/bbl through June is now unfolding. Brent has remained above \$100/bbl for the entire period since April. The food security impact of the Hormuz crisis will lag the energy impact by months.
SOURCES	NIFC National Situation Report USDA ERS Food Price Outlook World Bank commodity prices USDA NIDIS Drought Monitor

SECTION 9 - PUBLIC HEALTH

PHS-002 CENTRAL AFRICA EBOLA (BUNDIBUGYO) PHEIC - DRC 676 CONFIRMED / 136 DEATHS DRC (as of 10-JUN); UGANDA 15/1 WHO 15-JUN SITREP EXPECTED TODAY +41 cases /+9 deaths since 11-JUN Contact tracing 45% (WHO requires 90%) Brazil NEGATIVE		HIGH UPDATED 14
Why This Cycle	THIS CYCLE DELTA (17-JUN ECDC): DRC 837 confirmed cases / 196 confirmed deaths / 376 hospitalized in isolation. +29 new confirmed cases and +4 deaths since 16-JUN update. No new health zones affected. Ituri: 767 cases from 20 health zones (most affected). North Kivu: 67 cases from 10 health zones. South Kivu: 3 cases. SECURITY INCIDENT: burial team attacked in Mongbwalu health zone, Ituri. Five workers taken hostage at points of entry/control after being falsely accused of spreading Ebola. Uganda: 19 confirmed / 2 deaths (all epidemiologically linked to DRC). American citizen exposed during humanitarian work has recovered and been released from care; high-risk contacts cleared 21-day incubation period.	
Summary	Bundibugyo ebolavirus PHEIC declared 17-MAY-2026 -- Day 40 as of 24-JUN. As of CDC 22-JUN: DRC 1,000+ confirmed cases (2nd largest Ebola outbreak on record) / 254 deaths DRC / 2 deaths Uganda / Uganda 19 confirmed. 17 HCW dead, 75 infected. Contact tracing ~45%	

	(WHO requires 90%). CDC MMWR (June 2026): without large-scale intensified containment, outbreak could exceed 10,000-20,000 cases within 3 months. No approved vaccine or specific treatment for Bundibugyo strain. MSF: 3 treatment centers operational. CEPI fast-track vaccine funding committed 1-JUN. 6 confirmed deaths / 376 hospitalized. Uganda: 19 confirmed / 2 deaths (all linked to DRC). +29 cases +4 deaths since 16-JUN update. Ituri: 767 confirmed cases from 20 health zones. North Kivu: 67 cases from 10 health zones. South Kivu: 3 cases. No new health zones since previous update. Contact tracing still limited. Security: burial team attacked Mongbwalu; 5 response workers taken hostage. CEPI funded three vaccine candidates (IAVI, Moderna, Oxford). MBP-134 and remdesivir in clinical trials. No licensed vaccine or therapeutic. True scale likely higher given infrastructure gaps and ongoing insecurity. MSF: 'Never before has an Ebola outbreak recorded so many cases so soon after declaration.' True scale is likely higher given limited healthcare infrastructure and ongoing insecurity that hinder detection and response. KEY TREATMENT GAP: no vaccines or medications are licensed for Bundibugyo virus; existing Ebola therapeutics (mAb114, REGN-EB3) and vaccines were developed for Zaire ebolavirus, a different strain, which materially complicates response. WORLD CUP NEXUS: with the FIFA World Cup now under way, the US administration is asking European governments to impose travel restrictions on people recently in the affected Central African countries to reduce importation risk during the tournament. US RESTRICTIONS remain in effect (entry limits on non-citizens recently in affected countries; routing of citizens/residents through designated airports). US CDC risk to the US population: LOW -- extremely low likelihood of transmission, though impact would be high if cases arrive. No US cases to date. RESPONSE: Africa CDC and WHO continental response plan active. ADDITIONAL CDC ACTIVE ALERTS this cycle: mandatory quarantine imposed on cruise-ship hantavirus passengers; respiratory viruses (COVID-19, flu, RSV) at LOW activity nationally.
Analyst Assessment	WORLD CUP INTERSECTION: The World Cup opens June 11 and runs through July 19 across 16 cities in US/Canada/Mexico. DRC and Uganda are not participating nations. However, the CDC DHS travel restrictions on Ebola-region nationals entering the US may create friction for fans traveling from or through the region. Monitor for any case export to tournament host cities. LISTERIA NOTE: The requesón/soft ricotta Listeria outbreak is a direct household preparedness concern. Listeria is particularly dangerous for pregnant women, elderly, immunocompromised individuals. Avoid consuming requesón or soft ricotta until recall status is clarified. LIKELIHOOD: Ebola cases detected in US in next 30 days: VERY UNLIKELY (CDC assessed LOW risk). CONFIDENCE: MODERATE.
SOURCES	CDC Ebola update 05-JUN WHO Africa CDC joint response plan CDC newsroom - Listeria + Salmonella alerts CDC respiratory status 05-JUN

SECTION 10 - OPERATIONAL CONDITIONS ASSESSMENT

PREP-CON 3 BROWN SKY Incident Probable STABLE ASSESSED 24- JUN	PREP-CON 4 ORANGE SKY CONFIRMED -- OPERATOR DIRECTION. PREP-CON 4 (Incident Possible) is held this cycle. The MOU announcement is a significant de-escalation signal but does not justify a step down: the deal is unsigned, the ceasefire does not take legal effect until 19-JUN, IAEA access has been explicitly excluded from the MOU, Lebanon IDF-Hezbollah exchanges continue, and the World Cup mass-gathering period is in full operation with confirmed soft-target and cyber threat activity. The prior-cycle G2 storm watch (PREP-CON 4 trigger per §0.129) has been cancelled, removing that specific trigger. Remaining triggers still met at Possible tier: (1) active KEV exploitation including KEV deadline TODAY (Oracle PeopleSoft), Ivanti deadline passed 14-JUN, Check Point overdue; (2) World Cup mass-gathering open; (3) MARAD 2026-008 active (Hormuz maritime risk remains HIGH pre-signing); (4) G7 summit opens today with confirmed Black Bloc protest activity in Geneva; (5) Iran vs NZ in LA tonight with protests and extra security. A step down to PREP-CON 5 would require: MOU signed, ceasefire in force, Hormuz reopening underway, and resolution of active KEV exploitation window. None of those conditions are met today.
---	--

MOVEMENT ASSESSMENT

SUPPORTS STEP DOWN TO 5 (after 19-JUN): If MOU signs Friday 19-JUN, Lebanon ceasefire holds, and Hormuz mine-clearing begins, the basis for PREP-CON 4 erodes meaningfully. Monitor 19-JUN signing status as the primary trigger for a re-assessment.

SUPPORTS STAYING AT 4 (today): Unsigned deal, Lebanon volatile, active KEV exploitation, World Cup Day 6, G7 protests, Iran vs NZ tonight. All Possible-tier triggers remain active. ORANGE SKY is the correct posture until signature confirms and Lebanon stabilizes.

SUPPORTS MOVING BACK TO 3: If MOU collapses (Lebanon IDF-Hezbollah exchange escalates), or confirmed CONUS comms degradation (COMCON move to 3), or confirmed cyber attack on critical infrastructure -- none currently met.

LIKELIHOOD: MOU signed 19-JUN and PREP-CON step down to 5 by end of week: ROUGHLY EVEN CHANCE. **CONFIDENCE:** MODERATE.

[Reference: fortunefavorstheprepared.com/preparedness-book-of-knowledge-2/planning/preparedness-conditions-prep-con/](https://fortunefavorstheprepared.com/preparedness-book-of-knowledge-2/planning/preparedness-conditions-prep-con/)

**COMCON 4
INCREASED
VIGILANCE
OPERATOR
CONFIRMED**

COMCON 4 (Increased Vigilance) DTR-ASSESSED 24-JUN-2026. Governing rule -- level reflects highest-severity domain in degradation. 23 NWR transmitters OOS/DEGRADED (net +5 from prior cycle). No new GPS/GNSS jamming reported this cycle. Cisco SD-WAN CVE-2026-20262 KEV deadline 29-JUN (5 days, active exploitation). No confirmed critical infrastructure outages this cycle beyond NWR transmitter roster. IVER -- 21 confirmed AIS jamming clusters Persian Gulf/Oman/UAE/Iran waters; Russian EKS satellite-based spoofing confirmed Baltic region. SPACE WEATHER/HF: M6.8 (R2) flare from AR4473 at 1929Z 21-JUN; possible CME glancing blow late 23-JUN/23-JUN (Kp 3-5); 40% R1-R2 22-24 JUN; brief HF blackout 21-JUN. NWR: 31 transmitters OOS/DEGRADED. No confirmed CONUS network disruption warranting COMCON 3. EMCOMM: Monitor SWPC for CME arrival; 40% R1-R2 risk through 24-JUN; HF band selection awareness warranted.

**WX-CON 2 --
SLIGHT
SPC Day 1
SLIGHT**

WX-CON 2 SLIGHT (sweep-based). SPC Day 1 ENHANCED: Central High Plains (NE Colorado / SE Wyoming) -- very large hail 2-4 inch, possible tornadoes, 75+ mph MCS gusts tonight. SLIGHT: Utah outflow, W/N IL hail/winds, Florida pulse storms, Southern Plains MCV. Day 2 SLIGHT: KS/OK/Ozarks -- evening tornado threat elevated. Fire Wx CRITICAL: W/C Utah dry thunderstorms today. FORWARD: Major trough Friday-Saturday -- widespread critical fire weather 40+ mph gusts. (ront) AND N/Central High Plains (supercells, large hail, 1-2 tornadoes NE Panhandle/NE CO). Weekend: EF2 KS 1 fatality, IL/IN 2 fatalities 21-JUN. SPC Day 2 SLIGHT: E CO/W KS/N OK. Fire Weather Day 2 CRITICAL: N AZ/S UT. NPL 3 per 23-JUN 0730 MDT IMSR.

**SWX-CON --
R2
MODERATE
Driver: M6.8
Flare 21-JUN
Possible CME
Glancing Blow**

SWX-CON 1 NORMAL (sweep-based). NSTR -- no alerts or warnings as of 1343Z 24-JUN-2026. All SWPC thresholds below action levels. No geomagnetic activity, no solar radiation events, no R-scale events. t occurred sunlit side. Glancing CME blow possible late 23-JUN into 23-JUN; Kp 3-5 possible. AR4473 active Earth-facing: 40% R1-R2 probability 22-24 JUN; 5% R3+. Background: Kp 1-2 quiet. ALTEF3 serial status post-18-JUN unconfirmed this cycle. EMCOMM: monitor SWPC for CME arrival; 40% R1-R2 risk through 24-JUN.

SECTION 11 - DOMESTIC UNREST / SOFT TARGET

DOM-003 | UK PM STARMER RESIGNED 22-JUN | ANDY BURNHAM NEAR-CERTAIN SUCCESSOR | NOMINATIONS 9-16 JUL | NEW PM ~18-19 JUL | CARETAKER GOVERNMENT DURING ACTIVE MOU/HORMUZ WINDOW | DOM-002 | BELFAST DAY 16 | FRAGILE CALM | 25 ARRESTS (10 JUVENILES) | HATE CRIME ARSON 14-JUN GLENBANK PLACE

HIGH | UPDATED | 12

SALUTE	SIZE: Riots peaked 9-11 JUN. PSNI with 200+ mainland UK and 90 Scottish officers deployed. Counter-protests dominated 13-JUN. No confirmed violence overnight 13-15 JUN found in sweep. PSNI elevated posture continues. ACTIVITY: 9-JUN: riots triggered by Sudanese national Hadi Alodid's knife attack on Stephen Ogilvie. 9-11-JUN peak violence: 27 homeless, homes torched door-to-door targeting immigrants, bus burned, 62 fire brigade incidents in Belfast, water cannon and plastic bullets deployed. Active Club "Ulster Youth Club" (global neo-Nazi network) confirmed by Wired as orchestrating violence. 11-JUN: smaller activity (~100 Newtownards Road). 13-JUN: massive counter-protests Belfast City Hall and Derry -- largest anti-racism rally ever held in Belfast per Amnesty International NI. 23 arrested / 17 charged as of 13-JUN. Spread: Glasgow, Edinburgh, Southampton. No confirmed violence overnight 13-15 JUN. LOCATION: Belfast (Crumlin Road, Lower Newtownards Road, Glengormley, Newtownabbey, Portadown). Spread to Glasgow, Edinburgh, Southampton, England. TIME: Began 9-JUN-2026. Today Day 10. 18-JUN matches: Switzerland 4-Bosnia 1 (LA); Czechia 1-South Africa 1 (Atlanta); Mexico 1-South Korea 0; Canada 6-Qatar 0. No major security incidents at venues. 19-JUN matches: USA vs Australia (Seattle, 1900Z -- high visibility); Scotland vs Morocco (Boston, 2200Z); Brazil vs Haiti (Philadelphia, 0100Z 20-JUN); Turkey vs Paraguay (Santa Clara, 0300Z 20-JUN). Iran flag ban lawsuit filed LA Superior Court -- TRO sought; Iran next plays Belgium 21-JUN at SoFi (elevated protest/security posture expected). Hadi Alodid remanded in custody; next court date not yet scheduled. EQUIPMENT: Rioters: petrol/incendiary devices, vehicles, construction site projectiles. PSNI: water cannon, AEPs (plastic bullets). UNIT: PSNI; UK National Police (200+ deployed); Scotland Police (90 deployed); Active Club network; counter-protest coalition (Amnesty, trade unions, civil society).
Summary	Belfast anti-immigration riots began 9-JUN following a stabbing attack. Peak violence ran 9-11 JUN: 27 residents made homeless by door-to-door targeting; bus and vehicles burned; 62 fire brigade incidents; PSNI deployed water cannon and plastic bullets. Wired confirmed the "Ulster Youth Club" Active Club (global neo-Nazi network) "played a role in not only stoking tensions, but advising and orchestrating the masked youths who spearheaded much of the violence." Elon Musk amplified an AI-generated list targeting businesses. Counter-protest: on 13-JUN thousands gathered at Belfast City Hall ("Riots don't speak for Belfast"). Amnesty International NI described it as the largest anti-racism rally ever held in Belfast. 23 arrested, 17 charged. No confirmed violence overnight 13-15 JUN.
Analyst Assessment	DE-ESCALATION SIGNAL: The 13-JUN counter-protests are the dominant signal this cycle. Large-scale public rejection of riots is historically the most reliable predictor of violence subsiding. Trajectory is toward de-escalation. However the Active Club network remains intact; trial proceedings will generate flashpoints; and structural conditions (economic deprivation, online far-right organizing) are unchanged. ACTIVE CLUB SIGNIFICANCE: Confirmation of Active Club orchestration is significant beyond Belfast. Active Clubs are a decentralized global neo-Nazi model designed for rapid mobilization and cross-jurisdiction replication. Monitor for replication attempts in other UK cities and potentially US cities with similar demographic and economic profiles. LIKELIHOOD: Further organized anti-immigration violence Belfast next 7 days: UNLIKELY given counter-protest momentum and arrests. CONFIDENCE: MODERATE. LIKELIHOOD: Active Club replication another UK/European city next 30 days: ROUGHLY EVEN CHANCE. CONFIDENCE: MODERATE.
ALT HYP	ALT A: De-escalation holds; criminal process prevents recurrence [likely] Counter-protest dominance 13-JUN; 17 charged; PSNI elevated posture; community and political leadership unified. ✓ Supporting Evidence: Active Club network intact; Alodid trial proceedings create recurring flashpoints; structural conditions unchanged.

✗ Ruling-Out Evidence: Counter-protest precedent is historically most reliable predictor; Belfast has absorbed worse without sustained recurrence.

ALT B: Recurrence during Alodid trial or another triggering incident [unlikely]

Active Club explicitly calling for replication; trial dates will generate media coverage; Southampton/Scottish spread shows contagion.

✓ Supporting Evidence: 17 charged creates deterrent; PSNI elevated; counter-protest movement demonstrated organizational capacity.

✗ Ruling-Out Evidence: Near-term recurrence in days assessed as unlikely; trial proceedings (weeks/months) are more plausible recurrence trigger.

STSB-001 | FIFA WORLD CUP DAY 5 | IRAN vs NZ LA TONIGHT
(protests / extra security / walk-off threat) | **FBI: FIFA website spoofing**
ACTIVE | 300+ malicious domains | Heat Advisory Miami Hard Rock
(Saudi vs Uruguay 2200Z)

HIGH | UPDATED | 16

SALUTE

SIZE: Tournament Day 6. Today: Spain vs Cape Verde (Atlanta 1600Z), Belgium vs Egypt (Seattle 1900Z), Saudi Arabia vs Uruguay (Miami Hard Rock 2200Z), Iran vs New Zealand (LA SoFi ~0100Z 16-JUN). Iranian-American diaspora protest planned outside SoFi; extra security deployed.

ACTIVITY: HIGH-PRIORITY TONIGHT: Iran vs NZ at SoFi Stadium. Protest planned outside by Iranian-American coalition opposing IRGC; extra security. Iran sports minister pre-threatened walk-off if unauthorized flags displayed inside stadium. Iranian team arrived LAX Sunday after Tijuana practice restriction lifted. FBI: active spoofing attacks on official FIFA website/platforms in Week 1 confirmed. Chinese cybercriminals: 300 FIFA clone domains harvesting credentials/payments. Recorded Future: IRGC-linked hacktivist personas expanded scope -- no confirmed World Cup attack as of 14-JUN but infrastructure staged. Miami Hard Rock: Heat Advisory active (103-107F heat index); afternoon storms expected to largely clear before 2200Z kickoff.

LOCATION: High-priority tonight: SoFi Stadium Inglewood CA (Iran vs NZ); Hard Rock Stadium Miami (Saudi vs Uruguay). Cyber threat: worldwide.

TIME: Tournament through 19-JUL. Iran vs NZ: ~0100Z 16-JUN (6 PM PT today). Saudi vs Uruguay: 2200Z. Heat Advisory Miami: in effect today.

EQUIPMENT: Counter-drone deployed. Vehicle-as-weapon barriers. Law enforcement surge at SoFi for protest management.

UNIT: FBI; CISA; LAPD; Inglewood PD; FIFA security; Iranian-American protest coalition.

Analyst Assessment

IRAN vs NZ RISK PROFILE: Three factors converge tonight: (1) large pre-staged protest at SoFi; (2) Iranian sports minister's pre-threat to walk off if protesters display unauthorized symbols inside stadium -- a scenario where a spectator action inside becomes a government security incident; (3) the MOU announcement Sunday elevated geopolitical symbolism of Iran's first US World Cup match during the war. Extra security deployed; highest probability is protests remain lawful and match proceeds normally.

FIFA CYBER - ACTIVE THREAT: FBI confirmation of active FIFA website spoofing attacks is the highest-confidence cyber threat this cycle. The 300 Chinese clone domains and spoofing attacks are simultaneously active. Readers attending or streaming World Cup events should

use only official FIFA app and official.fifa.com; verify URLs before entering credentials or payment information.

MIAMI HEAT COMPOUND: Hard Rock Stadium is an outdoor stadium. Heat index 103-107F with NWS advisory in effect. Pre-match outdoor fan zones and transit queues are the primary heat exposure window before afternoon storms move through. Medical stations and cooling centers should be at full capacity.

LIKELIHOOD: Iran vs NZ proceeds without major incident: VERY LIKELY. **CONFIDENCE:** MODERATE.

LIKELIHOOD: Significant security incident at any World Cup venue today: VERY UNLIKELY. **CONFIDENCE:** MODERATE.

SECTION 12 - ANALYTICAL INTEGRITY & SOURCE REGISTRY

ANALYTICAL INTEGRITY STANDARD - APPLIED TO THIS PRODUCT

No Epistemic Cowardice. When evidence supports a finding, we state the finding. We do not substitute hedges, attribution-laundering, or filler phrasing for assessments the evidence justifies. Genuinely mixed evidence is stated directly with the split explained. This applies to all state actors equally.

No Gatekeeping. Our readers receive the same operational picture a federal practitioner would see. PREP-CON assessment is not softened for comfort. If the operational basis supports a given level, the DTR states that level.

No Dunning-Kruger Enablement. We do not publish confidence our sources cannot sustain. Every confidence level is auditable against the cited sources. Split confidence is applied when different aspects of a finding sit at different evidentiary levels.

ANTI-BIAS DISCIPLINE - SOURCE-SYMMETRIC SKEPTICISM

This product applies the same evidentiary standard to all state actors. Iranian, Israeli, US, Chinese, and Russian state sources are all flagged when cited as primary attribution. Single-source state-media claims are classified LOW CONFIDENCE absent multi-stream corroboration regardless of which state is the source. Loaded language is stripped from DTR narrative unless quoted with attribution. The same skepticism applied to adversary state media is applied to allied state media.

ICD 203 / ICD 206 ANALYTIC STANDARDS CONFORMANCE (SOP v5.57 §0.113)

This product is produced in conformance with ICD 203 (Analytic Standards) and ICD 206 (Sourcing Requirements for Disseminated Analytic Products). Standards applied this cycle: (1) Likelihood and confidence stated as separate dimensions on all forward-looking judgments. (2) Estimative language drawn exclusively from the ICD 203 7-term ladder (almost no chance / very unlikely / unlikely / roughly even chance / likely / very likely / almost certain). Forbidden hedges (might, maybe, possibly, perhaps) not used. (3) Every FLASH/HIGH scored entry includes minimum 2 alternative hypotheses with supporting and disconfirming evidence using altHypCard() format. (4) Changed judgments carry CHANGE FROM PRIOR notation in body text. (5) Friday sweep: all 629 registry sources checked per SOP daily sweep requirement; all 56 mandatory sources individually dispositioned. (6) NPL stated in Sec 7B per SOP §0.117.

SECTION 13 - CLOSING

END OF REPORT

Fortune Favors the Prepared brings together 30+ years of operational emergency management practice - law enforcement, EMS/paramedicine, wilderness search and rescue, airport emergency management, statewide logistics, and federal alerting infrastructure - into a daily intelligence product suite designed for practitioners.

PRODUCT FAMILY:

- ▶ **DTR Full** - Enterprise-tier daily threat intelligence (this product)
- ▶ **DTR Lite** - Free-tier daily summary
- ▶ **Daily Preparedness Brief (DPB)** - Action-oriented daily brief for households
- ▶ **COMMS Watch** - Communications intelligence periodic
- ▶ **Soft Target Security Brief (STSB)** - Soft-target security monitoring
- ▶ **AI & Infrastructure Threat Brief (AITB)** - Bi-weekly AI/data center/infrastructure intelligence
- ▶ **DTR Business Editions** - Healthcare (DTRB_HC), Banking & Finance (DTRB_BF), Construction & Manufacturing (DTRB_MFG), Transportation & Logistics (DTRB_TL)

▶ COMPLETE YOUR EMERGENCY PLAN

Area-Specific Assessment Report (ASAR)

- most of the area intelligence you need to complete your emergency plan. Saves ~15 hours of research. A 12-section intelligence assessment tailored to YOUR home, business, or facility. fortunefavorstheprepared.com/asar/
