Message Formatter & Traffic Log

Write a message once: ARRL Radiogram, ARL Radiogram, ICS-213 or MARS. Fill in SALUTE, SITREP, MEDEVAC and other field reports line by line. Log what you send and receive.

FREE TOOL

What it does

ARRL Radiogram
Preamble, address, text, signature. Check counted for you.

ARL Radiogram
Pick ARL numbered messages; spelled out, ARL added to the check.

ICS-213
General Message, blocks 1–10.

MARS
Simplified ACP-127 layout: precedence, DTG, FM, TO, BT, text, BT, NNNN.

Field reports
SALUTE, SPOT, SALT, SITREP, Community SITREP (eight Lifelines, tick the components), ACE/LACE, MEDEVAC, CASREP, GOTWA and the AmRRON forms, line by line as the courses teach them. Print, log, or send inside a message.

- **Traffic log** – every message sent or received, operator notes and unsent drafts, time-stamped with the operator on duty.
- **Print the log** as a full traffic log, an ICS-309 Communications Log or an ICS-214 Activity Log.
- **Export** – copy as text, print, PDF, Word; the log also to Excel.
- **Operators** – save your station's operators and pick who is on duty.

Getting started

1. Download the zip from the page below and unzip it.
2. Double-click **Message_Formatter.html**. It opens in Chrome, Edge or Firefox. No install, no account, works offline.
3. Add yourself on the **Operators** tab.
4. On **Compose**, write the message and pick the format, or pick **Reports** for a field report.
5. Copy it to read over the air, or print it.
6. **Log as SENT** or **Log as RECEIVED**.
7. On **Backups**, choose a backup folder (Chrome or Edge) or download a backup at the end of each session.

> **Your data stays on your device.** Nothing is sent anywhere. A private window won't save, and clearing browser data erases the log, so keep a backup.
